

## **8-FRAME COVER GUIDES: Installation**

- Turn Ultimate Hive Cover upside down and locate 4 screw starter dimples; 2 on each long edge about 1" from each side and 2" from the front and back.
- Put screw through bushing guide starting from the small side with point project out from the end with the flange.
- Screw firmly into the molded dimple; **Do Not** over tighten as this will strip the screw hole. The flange faces the hive covers and provides strength.
