FREQUENTLY ASKED QUESTIONS ABOUT BEEKEEPING

When do I order package bees?

It is best to order package bees at the beginning or very early in the year for spring delivery. The bees should be delivered after the date of the last hard freeze for your region. The package honey bee suppliers will be able to help you determine the best delivery date.

When should I hive my new package of honey bees?

The best time to hive the honey bees is late afternoon or early evening. Spray the honey bees with sugar water while still in the shipping container. This will make it easier to put the honey bees in the hive.

What kind of frames should I use when starting with package bees?

It is best not to mix solid plastic frames with wood frames when hiving package bees. It is confusing to the bees when mixed. We recommend using wood frames when hiving package bees.

What do I feed the honey bees in the spring?

It is best to feed a mixture of sugar and water in a one to one ratio. The bees will use the sugar syrup mixture until natural sources are available. In the fall, use a two part sugar to one part water mixture if the bees do not have adequate winter stores. Feeders on pages 41 -43 work well. You can also stimulate the honey bees to raise brood by feeding them Dadant's Brood Builder Patties or AP23® Patties. These items can be found on pages 46 and 48.

Where do I place my hive?

If you are in the city, you should put the entrance of the hive facing a high fence. This will force the bees to fly in a high flight pattern, avoiding neighbors. It is good to give the hives a wind break to protect them. You can also place the entrance facing the sun to allow the bees an early start in the morning. The hive can also be placed on a hive stand, concrete blocks or a wooden pallet to keep it off of the ground.

Do I paint the inside of the beehive?

No, paint the outside of the beehive only. Allow the paint to dry thoroughly before installing the bees.

How often should I check my new hive?

You can open the hive after a few days to see if the queen has been released. Look in the Queen Cage to

see if the Queen has been released. If the Queen has been released, you should check for eggs and larvae to be sure she is active. If the Queen has not been released, enlarge the hole in the candy in the Queen Cage. Three weeks after you have hived the package, you can examine the colony again. Be sure to keep feeding the colony sugar syrup during this time to stimulate comb building. You should see sealed brood in the colony at this time.

Can I keep bees in a straw skep?

No, honey bees are required to be kept in a beehive with removable frames. This is to allow inspection for diseases. It is the law in all states.

When should I add a second hive body or super?

You should add the second hive body or super when the majority of the frames in the first hive body are fully drawn out, (8 or 9 frames). A second super should be added after the first super is about one half full.

How much honey should I leave on the hive to overwinter?

As a general rule, you should have a full super or second hive body and 20 to 30 pounds of honey in the brood nest. This will amount to a total of 60 to 70 pounds of honey for winter and early spring consumption.

What should I look for in spring in the colony?

You should check for evidence that the Queen is laying eggs. You should also check the honey stores and pollen supply. If the honey stores are low, you may start feeding sugar syrup in a one to one ratio of sugar and water. The bees may consume about 10 pounds of sugar syrup in a one-week period.

How can I get information or help about beekeeping in my area?

All 50 states have state and local associations and are a very good source of information and help. They will be able to direct you to a bee club or an association in your area.

For contact information on the state associations call us at 1-888-922-1293 or visit <http://americanbeejournal.com/tiposlinks/beekeeping-associations/>.

**THE HONEY BEE IS THE ONLY INSECT
THAT PRODUCES FOOD EATEN BY MAN.**

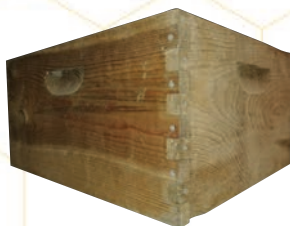

QUALITY WOODENWARE — A DADANT MANUFACTURING SPECIALTY

Hive Customization

At Dadant we understand that beekeepers do things their own way. That said we are happy to customize your bee hive needs. From branding, painting, dipping, and assembly we can customize your bee hive to fit your style. Give your local Dadant location a call about customizing your hives today. All customized orders must meet the minimum requirement of 500+ hives to qualify.

Branding

With all the beehive thefts going on within the industry we have been asked by many to bring branding back to our line of customization. We are happy to do so. Let us know what you would like branded and we will do our best to accommodate your needs.

Painting and Dipping

We are happy to be able to offer unpainted, painted, and dipped boxes. Our protective coatings will help your boxes last for years to come. Inquire today about other colors or copper methanolamine dipped boxes. Copper methanolamine dipped boxes only available through our High Springs, FL office. Lead times may vary. Ordering in advance is encouraged.

Imprinting of Frames

Dadant assembled frames will be stamped with our logo and year unless otherwise requested. If you wish to have your logo or something else stamped we are happy to try and accommodate your needs. Give us a call at 888-922-1293 today.

Hive Bodies And Honey Supers

- **HANDHOLDS** tapered cut for easy gripping
- **MOISTURE METERING** before cutting to prevent warping
- **UNIFORM INTERLOCKING JOINTS** to prevent cracking
- **PONDEROSA PINE** from the Northwest. The best wood for the job.
- **UNIFORM FRAME RESTS** provides the proper "Bee Space"
- **PRE-DRILLED NAIL HOLES** to prevent splitting
- **INTERLOCKING CONSTRUCTION** for superior strength

Dadant Construction ...
Small Details Make A Big Difference
Ponderosa Pine Wood Products

Our woodenware is manufactured from hand selected Ponderosa Pine. Each board has been carefully moisture-metered to assure its proper moisture content before it is precision-milled into the finished product. All our hive bodies and supers have "pre-drilled" holes for nails to prevent splitting during assembly.

3 Basic Grades

Select — A grade that is truly "selected" which allows only very small tight knots and no deviations in the joints, rabbets, or handholds.

Commercial — The most widely used by commercial beekeepers. Tight knots are allowed where they occur except in the joint and rabbet.

Economy — The same precise fit as the other two grades but is a lower wood quality. Does not pass quality standards for "select" or "commercial" but is a good serviceable box. Layer knots and knots with cracks or splits are allowed.

DADANT QUALITY FRAMES

Dadant Frame Construction

- 8% more wood in end bars (Full 3/8" thickness)
- Grooved bottom bar stronger and easier to use

— 2 Frame Styles —

Wedge Top Bar

- 1) Wood wedge is removed from frame.
- 2) Foundation is placed in frame.
- 3) Wood wedge is held firmly against foundation and nailed or stapled in place.

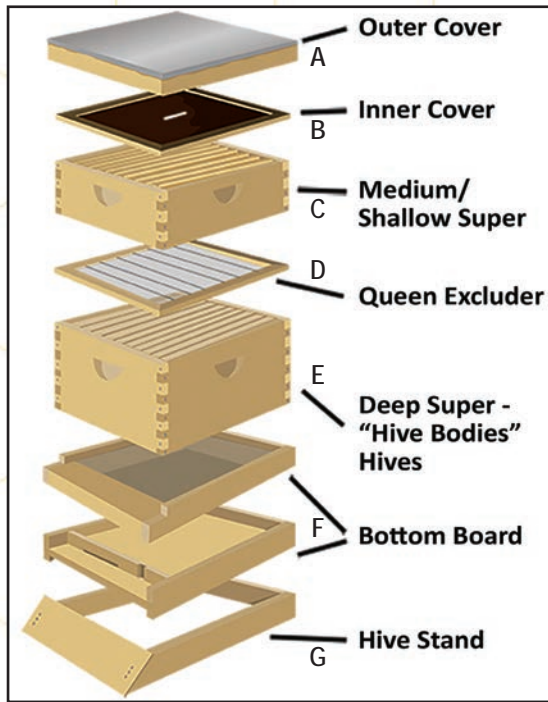

Grooved Top Bar

Foundation is placed in bottom-bar groove and top-bar groove. This frame works best with a rigid foundation such as Plasticell.

We will strive to maintain woodenware prices; however, due to escalating lumber costs, wood price increases may be necessary.

NOTE: Unless otherwise specified, frames with grooved bottom bars will be shipped. SOLID AND SLOTTED BOTTOM BARS ARE AVAILABLE IN 100 OR MORE QUANTITIES. Please specify bottom bar desired.

BEEHIVE COMPONENTS

The modern beehive is like a highly efficient multi-storied factory with each “story” having a specific function. These “stories” work together to provide a home for bees and a honey factory for the beekeeper.

A) Outer Cover — Telescoping cover “telescopes” over the sides of the top super to protect the hive. Galvanized covering.

B) Inner Cover — Creates a dead air space for insulation from heat and cold.

C) Shallow Supers — For “surplus” honey storage. Bees store their extra honey in these for the beekeeper to take. 6 $\frac{1}{2}$ ”, 5 $\frac{1}{16}$ ” supers or even hive bodies may be used.

D) Queen Excluder — Keeps the queen bee in the brood chambers as she is too large to pass through the excluder. Prevents her from laying eggs and raising brood in honey supers placed above the excluder.

E) Hive Bodies — “Brood Chambers” are the bees’ living quarters. The queen lays eggs in these chambers and brood is raised. Honey and pollen is also stored for the bees’ food.

F) Bottom Board — Forms the floor of the hive. Shown with wooden entrance reducer in place to keep mice and some cold out during winter.

G) Hive Stand — Supports the hive off the ground to keep hive bottom dry and insulate hive.

Successful beekeeping means easy manipulation of the frames of brood and honey to provide a “surplus” of honey beyond that needed by the bees to live on and rear their replacements. It is this “surplus” that the beekeeper removes and markets.

BEEKEEPING EQUIPMENT

The Frame

The modern hive for the honey bee as provided by *Dadant and Sons* is the perfect home for your honey bees and makes beekeeping remarkably simple and enjoyable. The hive is constructed to hold movable frames which in turn hold pure beeswax foundation (starter sheets for honeycomb). These frames hold the honeycomb that the honey bees make. The honeycomb provides storage space for honey and new bees develop in its individual six sided cells.

The Hive Body (brood chamber)

These large boxes containing ten (10) frames are the heart of the honey bee colony. Usually two hive bodies are used year round for the honey bees to use as an area to raise brood (larva and pupa) and to store extra food for themselves for use during winter when no nectar is available.

The Super

Additional boxes, usually smaller than the hive bodies, with movable frames are set on top of the brood chamber and provide space for the honey bee to store surplus honey which the beekeeper will harvest. The word Super comes from the word Superimpose which means, “to place in a covering position, to overlay.”

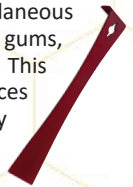

The Smoker

The smoker is a metal container with air pumping bellows attached. A smoldering fire is built in the metal fire chamber and the bellows are used to blow the smoke produced out through a nozzle at the top of the smoker.

When lightly puffed into a colony of honey bees the smoke causes a temporary confusion and disorganization within the colony. The honey bee’s group defensive behavior is disrupted. This allows the beekeeper to move calmly and to comfortably inspect the interior of their colonies.

The Hive Tool

Honey bees collect a miscellaneous product called propolis from tree gums, saps and resins — anything sticky. This they use to seal cracks and crevices within the hive. Because of the sticky nature of this product a special tool is used for those times when a little leverage is necessary to remove frames, supers, etc. from the hive.

The Bee Veil

The bee veil protects the face and neck. Many times it is made from wire mesh to help the veil stand away from the face.

The Gloves

There are a variety of types and styles of gloves available from *Dadant & Sons*. Gloves provide the beekeeper with protection when working the honey bee colony.

ATTENTION: DADANT PACKAGE BEE CUSTOMERS

for Pick-up only at Dadant Branches

At the selected Dadant offices listed below, bees will be available for pick-up. For details of day, time, location and cost, call your nearest Dadant Branch Location. (Most pickup days are mid-April.)

Package Bee Netting | Nuc Bee Netting

When we saw customers putting package bees in plastic tubs for the car ride home we thought we'd find a better way to help secure your cargo. Our package bee and nuc bee netting is perfect for the ride home with no escapees. Each fit over a 3 lb. package of bees or a 5-frame nuc box. Get your bee netting today to be safe on the ride home.

V02004S Package Bee Netting, Actual wt. 0.2 lbs... \$6.25

V02004L Nuc Bee Netting, Actual wt. 0.36875 lbs. . . \$7.15

B-Funnel

The B-Funnel is designed to reduce stress and save time and effort when installing package bees. Made of corrugated plastic, it is very easy to put together and use. A velcro strap holds it securely against the hive. The beekeeper then positions the bee cage on top of the funnel. The B-Funnel channels the bees directly into the hive, reducing the number of bees in the air. It assists the bees in finding their new home, is less stressful for the bees, and can be removed as soon as the bees have left the package box. Fits 8- and 10-frame hives.

Call for pricing on Small Cell Wired or Medium Plain

Note: Add \$.03 per pound to figures shown for all shallow sizes (4 3/4" and below).

Please Note: Working rates for Thin Surplus and Cut Comb Foundations are based on customers providing light wax. Additional upcharges will apply if light wax is not supplied.

All prices are for 25 lb. bulk packs only. (Special sizes—200# Wax Working Minimum or Additional \$110 set-up charge applies. Small Cell orders under 200# will have a \$300.00 set up fee.)

The Dadant Company has been working wax into foundation for their customers for many years. Our wax working rates include all the many steps it takes to process your wax into the finest 100% beeswax foundation available. Careful inspection during every step of the manufacturing process, along with durable and protective packaging, insures a final product of superior quality.

Because of the low prices reflected in the working rates, we must have your beeswax before shipping foundation and do require payment for the working charge. Beeswax foundations cannot be shipped safely in cold weather. For further information on the wax working program, contact your local branch manager.

M58701D 9/8" coated drone comb
Actual wt. 0.75 lbs. ea., 1-10. **\$4.95**

Varroa Mite on Honey Bee

The **Varroa Mite** is, without a doubt, the most serious parasite of honey bees in North America. Ignoring treatment of colonies infested with Varroa mites will result in colony death in 1 to 2 years. Most honey bee colonies in North America are infested with Varroa mites.

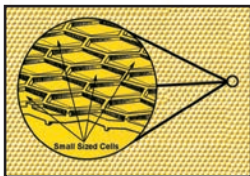

Varroa Mite

Actual Size

Dadant Small Cell Beeswax Foundation 4.9 & 5.1

Many beekeepers believe that varroa mites have a difficult time reproducing on worker brood raised in small cell comb. So, if you are an experienced beekeeper who has an experimental nature, this may be an opportunity for you to move ahead of the chemical control crowd with your honey bee management.

WHY A 5.1?

Many recommend a transition from the standard 5.4 to the 4.9 cell foundation allowing the bees to adjust more readily and help avoid the erratic comb drawing that can occur with a direct downsizing from the 5.4 to the 4.9 — thus a middle step with the 5.1.

Drone Cell Foundation

By using a few frames of drone comb, you can lure Varroa mites to the developing drone brood, and the mites become trapped within the drone cell when the bees cap the cells. Remove the frame of capped drone cells. Put it in a plastic bag in your freezer overnight to kill the mites. Remove from the freezer and let warm. With the cappings scratcher (page 77), break open the drone cells. Then, put the frame back into the colony and allow the worker bees to clean out the cells, getting rid of the dead varroa mites and drones. After the queen lays drone eggs in these cells again, this Varroa trapping cycle is repeated.

F45010 8 1/2 x 16 1/4 Non-wire (Drone Comb) Foundation
10 Sheets Per Package, Actual wt. 1.8 lbs. ea. **\$23.95**

F45050 50 sheet Non-wire (Drone Comb) Foundation

F45000 20 lb. Non-wire (Drone Comb) Foundation
Actual wt. 22 lbs. (Approx. 7 sheets per lb.) ea. **\$269.95**

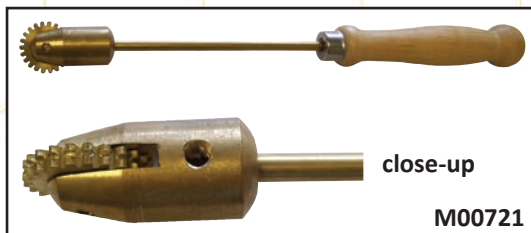

FRAME/FOUNDATION HARDWARE

Cross-wiring is necessary to firmly hold some foundations in place. For example, we recommend 4 cross-wires when using 8½" medium brood foundation, but only 2 for holding 8½" crimp wire foundation. Beekeepers even find it advantageous to put one cross-wire in bulk comb foundation — then pulling out the cross-wire from the end of the frame prior to cutting the bulk comb. To prevent the wire from cutting into the frame end bars, we recommend using eyelets to protect the frames.

Grooved Spur Embedder

This is another style of spur embedder. It has a groove between the wheels that will help make the job easier. *Cannot be used with crimped frame wire.*

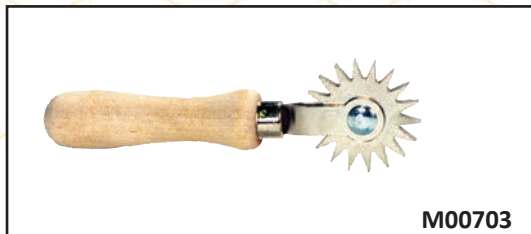

M00721 Grooved Spur Embedder,
Actual wt. 0.12 lbs. **\$13.95**

Spur Embedder

Uses hand pressure to fasten wire in any foundation needing horizontal wires for added support. Roll the wide-tooth spur points along each wire. May be used warm (preferable) or cold. Many beekeepers purchase two — keep one heating while the other is in use.

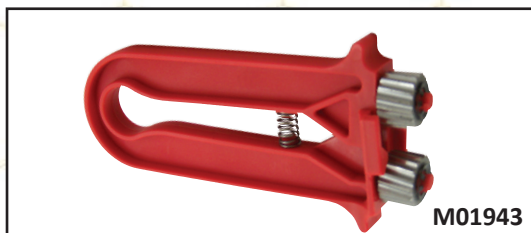

M00703 Spur Embedder, Actual wt. 0.2 lbs. ea. **\$14.05**

Wire Crimper

Support your wax foundation by tightening and crimping your frame wire with our wire crimper. Helps give wax foundation the extra support it needs.

M01943 Wire Crimper,
Actual wt. 0.1 lbs. **\$14.05**

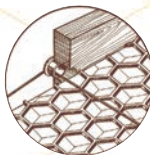

Brass Eyelets

Small brass eyelets are punched into the wiring holes in end bars of brood and super frames. Prevents wire from cutting into the wood. Keeps horizontal wires tight. Special punch makes insertion simple and easy. Sold separately.

M00709 1000 Eyelets, Actual wt. 0.19 lbs. **\$12.75**

M00710 5000 Eyelets, Actual wt. 0.96 lbs. **\$49.95**

M00711 Punch, Actual wt. 0.05 lbs. **\$5.95**

Frame Wire

Top grade tinned wire made especially for the bee industry with great tensile strength. Should always be used for horizontal wiring brood or extracting frames in which plain or unwired foundation is to be used. May also be used with crimp-wired foundation to gain even greater strength. This wire is 26 gauge.

M00705 ½ lb. Spool, Actual wt. 0.82 lbs. **\$9.45**

M00706 1 lb. Spool, Actual wt. 1.49 lbs. **\$13.95**

M00707 5 lb. Spool, Actual wt. 5.4 lbs. **\$38.95**

Frame/Form Board

For use with 9⅞", 6¼" and 5⅜" frames. This is a useful tool for nailing frame wedges and inserting foundation in frames. It is a good companion for the spur embedder **M00721** or **M00703** (shown above). It supports the frame with foundation while embedding. May also be used for hand-wiring frames.

B10301 Form Board, Actual wt. 1.9 lbs. **\$17.95**

Electric Embedder and Transformer — Sold Separately —

This embedder, used with the 12 volt transformer shown below, heats horizontal frame wire so it is well-attached, but does not mar the foundation. Embeds one wire at a time.

M00701 Embedder Only, Actual wt. 0.55 lbs. **\$73.60**

M00702 12 Volt Transformer Only, Actual wt. 2.99 lbs. **\$79.25**

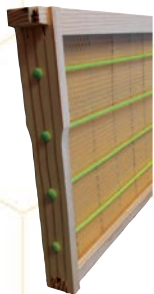

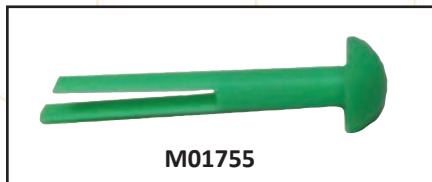

NAILS, RABBETS AND SUPPORT PINS

Plastic Support Pins

Slip the pin in the holes on the end bar and slide the sheet of foundation in to securely hold it in place. Minimum of two per end bar. Carton of 100. Actual wt. 0.05 lbs.

M01755 c/100 pins \$16.95

Plastic Rods

Support Rods — Sick of cross-wiring frames? These support rods slide through the holes in the end bars and are locked in place. Wire your frames in seconds.

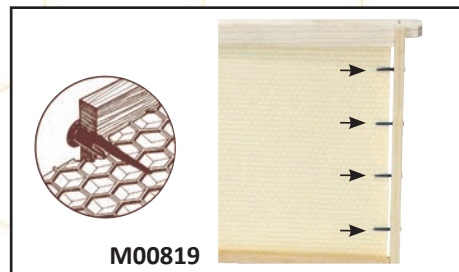

M0175410 c/10 rods, Actual wt. 0.1 lbs. \$6.95

Support Pins

Support pins are small metal pins similar to clothespins. Simply press these pins through the holes in the frame end bars so foundation is held in pin slot. For many, especially beginning beekeepers using crimp wired foundation in brood chambers, support pins are much easier to use than the sometimes tedious cross wiring to prevent foundation sagging. Cannot be used with Plasticell foundation.

M00819 200 pins, Actual wt. 0.44 lbs. \$24.95

M00820 1000 pins, Actual wt. 2.25 lbs. \$106.95

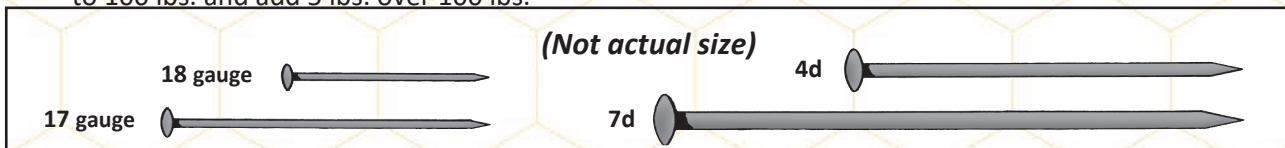

Showing correct placement of staples

Nails for Frame and Super Assembly

For nailing frame top bars to end bars and for bottom bars to end bars use **M00727** (1¼"). For nailing wedges use **M00726** (¾"). For nailing hive bodies and supers, we recommend **M00731**, 7d (2¼") galvanized nails. For nailing bottom boards we recommend **M00730**, 4d (1½") galvanized nails.

*For shipping weight add 2 lbs. to quantity ordered up to 100 lbs. and add 5 lbs. over 100 lbs.

10-FRAME HIVE STANDS AND LANDING BOARDS

Dadant Stainless Hive Stand

Dadant-made Stainless Steel Hive Stands sleek design is perfect for all types of apiaries. From a single hive operation to a 20 colony out yard, these stands are made to last. Ships knocked down. Easy to assemble.

M00698 Dadant Stainless Hive Stand, Actual wt. 7.5 lbs. **\$89.00**

AntCant

The AntCant, ant barrier coating (patent pending) was scientifically developed to be a non-toxic, low maintenance deterrent from ant infestation. The coating works by preventing the ants from attaching to an inclined coated surface. Since they can't get a grip, they fall off and do not make it to the attractant (food, garbage, etc.) After being discouraged the ants give up and leave! Once the ants know the barrier is in place they don't seem to even re-challenge it! Includes 3.5 oz. bottle and a roll of 2" aluminum tape.

M001440 AntCant 3.5 oz. bottle, Actual wt. 0.5 lbs. **\$29.95**

Ultimate Hive Stand Deluxe Model

The Ultimate Hive Stand Deluxe Model is the only hive stand you will ever need. It has a classic design that is fully functional and looks great in any apiary or garden. It has swing out frame holders to make working the hive easier and when not in use will fold up out of the way. The stand raises the hive 12 inches off the ground for easier access and better ventilation. It works with any bottom board and no wooden hive stand is needed. It is fast and easy to assemble, usually taking less than 2 minutes with a screwdriver. It is made from recycled materials.

M01693 10-frame Ultimate Hive Stand Deluxe Model, Actual wt. 8.9 lbs. ea. **\$94.95**

M01696 10-frame Beemax Deluxe Hive Stand, Actual wt. 9.8 lbs. ea. **\$106.95**

Unassembled Hive Stand 10-Frame

To eliminate moisture problems and provide insulation, it is important to keep the hive from making contact with the ground. This durable wood hive stand protects the hive bottom board and gives bees an angled landing area. **Unassembled.**

M00695 Actual wt. 3.06 lbs. **\$19.95**

M00696 Carton of 5, Actual wt. 15.3 lbs. **\$89.95**

Slatted Rack

You asked for it and here it is. The slatted rack sits in between your bottom board and brood box, providing ventilation and extra space for the bees. The additional room provided when using the slatted rack is thought to help reduce swarming. Frames line up with the slats so varroa will fall through the screens in your bottom boards.

B91401 10-frame, Actual wt. 3.5 lbs. **\$28.95**

5+ **\$26.95**

10-FRAME TOP COVERS

Telescoping Cover with Inner Cover

A strong, rigid cover with full thickness interlocking side rims. Interlocking ends are pre-drilled for easy handling. A heavy galvanized metal top has all four edges turned down to protect the edges of the wood. Metal top has pre-punched holes for nailing. This entire cover “telescopes” down over the inner cover and a portion of the top super. An inner cover is included. Unassembled. 10-Frame

Garden Copper Top Cover

We are pleased to offer the Dadant 8-frame Garden Copper Top. It is made of the finest materials available. *Please note that we will not accept returns of the copper tops due to scratches or spots caused by touching the copper. May not be available at all branch locations.* Actual wt. 13.55 lbs.

C12601 Garden Copper Top Cover \$89.95

C12601

Assembled

Clear Dome Cover 8-Frame

Clear Dome Cover for your beehive. This cover allows you to see the activity in the hive without having to open the hive. Perfect for visitors to see the active honey bees moving on the frames or feeding on a feeder in your hive. The people who are curious about the beehive but are nervous about the honey bees can see the action without disturbing the honey bees. Actual wt. 0.45 lbs.

M016108 8-Frame Clear Dome Cover \$19.95

M016108

8-FRAME INNER COVERS

Ultimate Insulated Inner Hive Cover

The Ultimate Inner Hive Cover reduces energy demand for healthier and happier bees that produce more honey and over winter more successfully. Multiple wintering entrance options to fit any apiary need. Part of a complete modular/component system of beekeeping products. Actual wt. 3.15 lbs.

M01606 \$32.50

M01606

Assembled 8-Frame Inner Cover

Masonite inner cover is strong and durable. Use with bee escape to clear bees from honey supers. Actual wt. 1.7 lbs.

PONDEROSA PINE LASTS LONGER

Plywood Inner Cover with Feeder Hole

These inner covers work great to feed your colonies while keeping pesky critters including robbing bees away. Place an empty hive body on top to act as a shell and then your telescoping cover. Use a standard Boardman feeder cap in hole with a quart or 5 lb. round container of syrup. Actual wt. 1.7 lbs.

M60050 8-Frame Plywood Inner Cover \$20.95

Jar and hive not included

M60050

Notched upper entrance

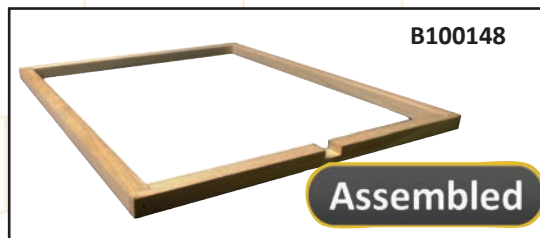

Assembled

Super Shim

The super shim is to be used only when your honey supers have been completely drawn out. Place shim above your queen excluder and below your honey super to give the bees an upper entrance/exit from the honey supers.

Note: Bees will burr comb the space from bottom of shim to bottom of super should you leave it on too long. Actual wt. 0.6 lbs.

B100148 8-Frame Super Shim \$7.25
5+ \$6.75

B100148

Assembled

Slatted Rack

You asked for it and here it is. The slatted rack sits in between your bottom board and brood box, providing ventilation and extra space for the bees. The additional room provided when using the slatted rack is thought to help reduce swarming. Frames line up with the slats so varroa will fall through the screens in your bottom boards. Actual wt. 2.8 lbs.

B914018 8-Frame Slatted Rack \$28.95
5+ \$26.95

B914018

Assembled

8-FRAME EXCLUDERS AND STANDS

Metal Bound Excluder

The metal bound excluder has the same precisely spaced welded wires as the wood bound excluder. This wire grid is edged (bound) with metal on all edges.

M00893 8-Frame Metal Bound Excluder, Actual wt. 2.05 lbs. . . . \$11.35 ea.

M00893

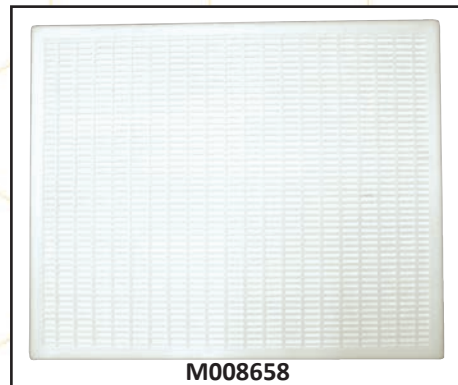

Improved Plastic Excluder

This excluder is all plastic with properly sized openings for the worker bees to travel through. Flexible and durable. Easy to clean, corrosion proof.

Actual wt. 0.55 lbs.

Dadant Stainless Hive Stand

Dadant-made Stainless Steel Hive Stands sleek design is perfect for all types of apiaries. From a single hive operation to a 20 colony out yard, these stands are made to last. Ships knocked down. Easy to assemble.

M00698 8-Frame Stainless Steel Hive Stand, Actual wt. 7.5 lbs. . . . \$89.00

Ultimate Hive Stand Deluxe Model

The Ultimate Hive Stand Deluxe Model is the only hive stand you will ever need. It has a classic design that is fully functional and looks great in any apiary or garden. It has swing out frame holders to make working the hive easier and when not in use will fold up out of the way. The stand raises the hive 12 inches off the ground for easier access and better ventilation. It works with any bottom board and no wooden hive stand is needed. It is fast and easy to assemble, usually taking less than 2 minutes with a screwdriver. It is made from recycled materials.

M01694 8-Frame Ultimate Hive Stand, Actual wt. 8.88 lbs. . . . \$94.95

M00698

Stainless steel

AntCant

The AntCant™, ant barrier coating (patent pending) was scientifically developed to be a non-toxic, low maintenance deterrent from ant infestation. The coating works by preventing the ants from attaching to an inclined coated surface. Since they can't get a grip, they fall off and do not make it to the attractant. Includes 3.5 oz. bottle and a roll of 2" aluminum tape.

M001440 AntCant
Actual wt. 0.5 lbs. . . . \$29.95

Assembled 8-Frame Cedar Hive Stand

Our 8-frame Cedar hive stand will keep your bottom boards up and off the ground and give you years of service. Both solid and screened bottom boards will work with these. Actual wt. 2.18 lbs.

M00778

Wax Tube Fastener

Wax Tube Fastener is ideal for securing foundation into grooved top bar (cut comb and chunk honey) frames. Metal cylinder is filled by lowering into container of hot, liquid beeswax. When cylinder is filled, wax is retained in cylinder by placing finger over air hole. With foundation in place, the wax tube fastener is run along the top bar groove. By removing finger from the air hole, a small amount of wax flows out to cement the foundation to the top bar.

- M00778** Wax Tube Fastener, Actual wt. 0.95 lbs. ea. **\$17.95**

M00753

Frame Cleaner

A handy tool to clean top or bottom groove of any style frame. Quickly removes wax and propolis from grooves. Especially useful for comb honey production.

- M00753** Frame Cleaner. Actual wt. 0.05 lbs. ea. **\$8.95**

M00336

Serrated Comb Honey Knife

The best comb cutting knife we have found. This extremely sharp and serrated knife makes slicing through comb a breeze. Total knife length 8.5" (blade length 4")

- M00336** Serrated Comb Honey Knife,
Actual wt. 0.1 lbs. ea. **\$16.95**

M00770

Section Scraping Knife

This knife is specially designed and constructed for cleaning wax and propolis from finished sections. The notch in the top is ideal for edges — it prevents cutting into the honey.

- M00770** Section Knife,
Actual wt. 0.5 lbs. ea. **\$17.95**

NEW!

Comb Honey Cutter

This is a perfect tool for professional and backyard beekeepers who produce cut combs. With this tool, you no longer have to struggle to cut through cut combs using old-style cold cutters and sticky surfaces. The heated cutting blade makes cutting cut combs a breeze. It cuts precisely the exact size of the cut comb every time. It has a separate temperature controller that allows users to increase or decrease the temperature based on their experience in cutting combs. 4 X 4-inch cutting blade.

Complete Round Section Super Ready to Use Except for Installing Foundation

Round Section Super is shipped assembled. Purchase foundation below, (item number **F31001**). Insert it between section half frames, and place super on the hive.

Actual wt. 11.18 lbs. (Covers sold separately — See left hand column — Clear or opaque.)

10-frame holds 8 combs
8-frame holds 7 combs

- M01024** 10-frame ea. **\$159.95**
- M010248** 8-frame ea. **\$159.95**

Each portion of the foundation becomes a part of the comb honey for sale. We use the utmost care in selecting only the very finest of virgin capping wax for the manufacturing of our thin surplus foundation. The raw wax is then washed, cleaned and filtered so only pure 100% beeswax is present in the finished sheet of foundation. Strong sidewalls on each cell help your bees to finish beautiful sections of sparkling white comb honey.

FOR CUT COMB & CHUNK HONEY PRODUCTION

We also recommend 4 $\frac{3}{4}$ " Thin Surplus and 4 $\frac{3}{4}$ " Cut Comb foundation.
All of these products are listed on page 15.

FEED CHART

FEED ADDITIVES & SUPPLEMENTS	METHOD OF APPLICATION	TIME OF YEAR TO APPLY
AP23 & Brood Builder	These pollen subs may be fed either dry or in patty form. If feeding patties and running double brood boxes, place patties between boxes. If running singles feed on top of frames.	Feed in spring to boost colonies populations and in the fall after miticide treatments. May also be fed any time a pollen dearth occurs.
Honey - B - Healthy	Mix 1-2 teaspoons per quart when fed in sugar syrup. Use up to four teaspoons when used as a spray with 1:1 syrup in place of a smoker to calm bees.	Feed during late winter, early spring, fall or dearths of nectar and may also be used to build up nucs, weak colonies and swarms.
HBH Super Plus	Mix 1 tsp. per quart of various sugar water mixes which can be increased to 3 tsp per quart. For patties test effect of 1 tsp. per lb and adjust as needed.	Best in Spring and Fall but can be used any time of year. Feed with Honey Supers removed.
HBH Vitamin B	Add ½ tsp. to each quart or liter of sugar water when feeding. If used in protein patties, add ½ tsp. per 3 lbs dry	Best in Spring and Fall but can be used any time of year. Feed with Honey Supers removed.
Complete	Feed Complete anytime you are feeding sugar syrup. Can be fed in syrup, by drench method and in nutritional supplement protein patties.	Apply Complete whenever feeding is needed.
Nozevit Plus	15-20 drops per colony mixed in ¼ quart sugar syrup or sprayed on frames. May be fed in pollen patties 20 drops per 1 pound.	Use as a feed supplement two times in the spring and fall at 10 day intervals
Optima	It is advised to mix 1 - 2 teaspoons of Optima per gallon of syrup when fed through preferred hive feeder. A 100 ml bottle will make 20 gallons of syrup. When feeding by drench method it is advised to mix 4 teaspoons per quart of syrup and drench at rate of ¼ quart or 10 - 12 ounces solution per colony 4 times at 4 days apart. When feeding in pollen patties ½ teaspoon of optima per lb of patty is recommended.	Whenever feeding is needed or bees are overstressed.
Sugar Syrup	For spring feeding mix 1 part sugar to 1 part water to stimulate foraging. For fall feeding mix 2 part sugar to 1 part water if not enough honey has been stored for winter.	Apply when needed.

TOP FEEDERS

Wooden Hive Top Feeder with Plastic Trough

Feeding your bees has never been easier. Our newly designed 8- and 10-frame top feeders are the ticket to get your bees up to weight. The 8-frame feeder will hold 2 gallons of syrup and our 10-frame model will accommodate 2.5 gallons of syrup. Sloped bottom ends of the feeder will feed syrup to the trough area when placed on level hives. Easy to read fill lines at the one and two gallon mark help you measure the right amount of syrup needed.

- M01436** 10-Frame, Actual wt. 5 lbs. ea. **\$39.95**
- M01435** 8-Frame, Actual wt. 5 lbs. ea. **\$39.95**

M01435

Wooden Hive Top Feeder

This 8-frame wooden pine feeder is the best we have seen on the market. All joints are caulked with 100% silicone to ensure proper sealing and the bottom is made out of urethane coated maple plywood for durability against moisture. Wooden floats help keep drowned bees to a minimum.

- M01454** 10-Frame, Actual wt. 7.3 lbs. ea. **\$36.95**
- M01453** 8-Frame, Actual wt. 6.12 lbs. ea. **\$35.95**

Assembled

M01438

Easy Grip One Gallon Feed Can

The Easy Grip One Gallon feed can is made of high density polyethylene and molded here in the U.S.A. Replaces the older metal cans used by many commercial beekeepers. Come with pre-punched lids. No need for paint as these won't rust.

- M01438** Actual wt. 7.2 lbs. ea. **\$10.95**

Wooden Nuc Top Feeder

This 5-frame pine nuc feeder is the best we have seen. All joints are caulked with 100% silicone to ensure proper sealing and the bottom is made out of urethane coated maple plywood for durability against moisture. Wooden floats help keep drowned bees to a minimum.

- M01452** Actual wt. 5.04 lbs. ea. **\$33.95**

BEE FEEDERS

Bee Buffet Feeder

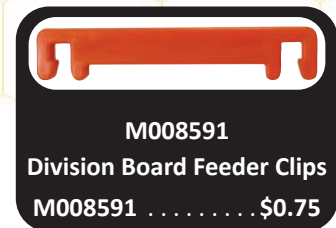

A feeder designed for either open or hive top feeding, of both liquid food (sugar water) and pollen patties. This feeder can be used with large or small mouth pint and quart mason jars. Feeder includes base, cover, small and large jar bands and lids, and a patty cup.

M01455 Bee Buffet Feeder \$14.99

9⁵/₈" Division Board Feeder

Finally a division board feeder that virtually eliminates drowned bees. **Heavily ribbed** interior gives bees a perfect foothold while climbing in or out. Extra thick sidewall construction puts more material where it's needed for years of use. Holds approx. 1 gallon. *Exclusive new condensation points — channels moisture away from feeder. Fits 9⁵/₈" deep body hive. Also available for 6⁵/₈" super. Actual wt. 1.2 lbs. ea.*

BEE FEEDERS

4-Jar Feeder

This 4-jar feeder will keep you from having to refill jars every other day when introducing package bees or nucleus colonies. This will also come in handy when trying to get hives up to weight before winter. Place above inner cover hole and use a brood box as a shell. **Jars and lids not included.**

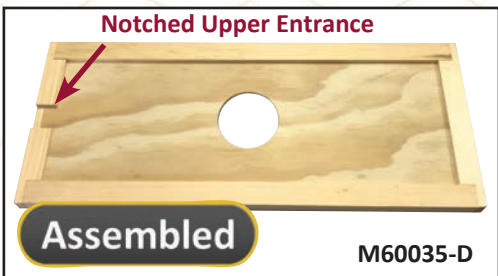

M00825 Actual wt. 1 lb. ea. \$19.95
 M00887 Feeder Lid Only, Actual wt. 0.03 lbs. ea. \$1.75

Plywood Inner Cover with Feed Hole

These inner covers work great to feed your colonies while keeping pesky critters including robbing bees away. Place an empty hive body on top to act as a shell and then your telescoping cover. Use a standard Boardman feeder cap in hole with a quart or 5 lb. jar of syrup. **Jar and lid not included.**

M60055 10-Frame, Actual wt. 2.05 lbs. ea. \$20.95
 M60050 8-Frame, Actual wt. 1.7 lbs. ea. \$20.95

Plywood 4 & 5 Frame Inner Cover with Feeder Hole

Our nuc inner cover is the same one that comes with our support hive. It works well with both 4- and 5-frame nuc boxes. Place empty nuc box on top of inner cover to act as a feed shell. Invert feed jar in hole. Standard G70 Boardman Feeder lid fits hole. **Jar and lid not included.**

M60035-D Nuc Inner Cover with Feeder Hole, Actual wt. 1.1 lbs. ea. \$13.95
 M00887 Feeder Lid Only, Actual wt. 0.03 lbs. ea. \$1.75

Plywood Nuc Top Cover Only

This 5-frame nuc cover is fully assembled. G70 feeder cap fits the hole in the center and makes feeding your start up colonies a breeze. **PAINTING IS REQUIRED.**

M60030 Plywood Top Cover only, Actual wt. 2.4 lbs. ea. \$14.95

Feeder Jars — Glass 3 LB. Quart Jar and 5 LB. Round Jar

We have been using these 3 lb. quart and 5 lb. round jars as feed jars for many years. Easy to clean and refill, these can be used with our 4-jar feeder, our new plywood inner covers with feed hole and for your honey storage needs. Each jar makes a great container for honey and some use them exclusively for their payments to the landowner of the property the beekeepers hives are sitting on. It is also known as a yard rent jar. Both take a standard G70 closure.

✘ M001931 3 LB Jar Carton/12 \$22.50 Actual wt. 10.78 lbs. ea. ✘ M001921 5 LB Jar Carton/6 \$30.85 Actual wt. 8.96 lbs. ea.

 M014555 Fits 5 gallon bucket, Actual wt. 0.4 lbs. ea. \$15.45

FEED ADDITIVES

Nozevit plus

Nozevit Plus incorporates the original highly popular Nozevit product and adds additional whole plant polyphenols aimed at the longer term health of the honey bee while maintaining the same application rate and methodology. It is an all-natural product helping to promote and maintain the intestinal integrity of the honey bee along with the long-term health and vitality of your bees.

- M01955** - 2 fl. ozs., Actual wt. 0.15 lbs. ea. . . . \$24.95
- M01956** - 8.45 fl. ozs., Actual wt. 0.65 lbs. ea. **\$98.95**
- M01958** - 32 fl. ozs., Actual wt. 2.45 lbs. ea. . **\$259.95**

Recommended feeding for Nozevit

- ½ quart or approximately 10 ounces of light syrup with 1 ml of nozevit or 20 drops
- Apply by either drenching or spraying syrup directly on top of frames in hive
- For preventive care we recommend feeding your bees two times, 10 days apart in spring, fall and during summer nectar dearths.
- For bees under extreme stress feed four times at 4 days apart
- Add to your pollen patties. 20 drops per pound or for the larger beekeeper 500 ml to 310 lbs. of dry product.
- Always store unused Nozevit in a cool dark location

◊ 2 fl. oz bottle of Nozevit will feed 50 hives one time when mixed into 4 gallons or 15 liters of syrup
 ◊ 8.45 fl. oz bottle of Nozevit will feed 250 hives one time when mixed into 22 gallons or 83 liters of syrup
 ◊ 32 fl. oz bottle of Nozevit will feed 1000 hives one time when mixed into 88 gallons or 333 liters of syrup

SuperDFM

SuperDFM® provides healthy bacteria to the bee's digestive tract, optimizing digestion, nutrient absorption, and strengthening immunity. SuperDFM®-HoneyBee™ is an all-natural and completely safe probiotic supplement. Accepted for organic use. No Preservatives. No Animal Ingredients. Non-GMOs. No Resistance Build-up!

- Stimulates Bee Health, Digestion, and Nutrition
- Suppresses Chalkbrood (*Ascoaphera apis*)
- Increase Nurse Bees' Performance
- Establish Beneficial Microflora
- Supports Strong Colony Health!

Honey-B-Healthy

Honey-B-Healthy was developed in 1995 by a commercial beekeeper. Rich in specially processed essential oils, many large commercial beekeepers use it to fortify colony health and build resistance to the problems prevalent in today's apiaries. Easy to administer by either feeding or the dousing method. Honey-B-Healthy can be added to a spray and used in place of smoke. Skilled beekeepers find it useful to build up weak colonies and when combining colonies.

Vitamin-B-Healthy™

VITAMIN B HEALTHY™: used as a feeding supplement. Can be used alone in syrups, protein patties and along with Honey-B-Healthy and Amino-B-Booster to help strengthen colonies weakened from disease, pesticides and pollen stress. Helps provide needed nutrients vital for bee health and helps build strong healthy colonies for maximum honey production and pollination. Can also be used to help build up weak, over-winterized colonies, packages, nucs and swarms. Especially beneficial when bees are producing brood and available pollen sources are limited in quantity and/or the pollen is lacking essential vital nutrients causing dying yellowing (snot) brood and dwindling colonies.

M01939 16 oz. Vitamin-B-Healthy
 Actual wt. 1.4 lbs. **\$33.95**

M01939

Honey-B-Healthy® Super Plus

HONEY-B-HEALTHY Super Plus: is a special essential oil emulsion and when used with Honey-B-Healthy, Amino-B-Healthy and/or Vitamin-B Healthy, produces a synergistic (amplified) effect. When used alone, Super Plus has been shown to help keep hives cleaner while improving overall colony health. We have observed that, when combined with any combination of other Honey-B-Healthy products, Super Plus will accelerate consumption of the feeding mix. While any of our products can be used by themselves, we do advise that Amino-B Booster be combined with Original Honey-B-Healthy or Honey-B-Healthy Super Plus to help keep this liquid protein stable. (Amino-B Booster provides the protein amino acids the bees need). Vitamin B Healthy provides the bees with needed vitamins and minerals. All of our products are made of food grade ingredients in an FDA registered food manufacturing facility. However, they are not intended for human consumption.

M01937 16 oz. Honey-B-Healthy Super Plus

M01938 1 Gallon Honey-B-Healthy Super Plus
 Actual wt. 11 lbs. lbs. **\$139.45**

M01937 M01938

Amino-B Booster

Protein Benefits:

- Stimulates brood rearing when there is no natural pollen or nectar
- Stimulates a nectar flow and pollen bloom when using 1:1 sugar syrup with HBH plus protein
- Provides all vital amino acids, plus 9 more
- Adds many health benefits especially with the HBH; larger, more robust and hardy bees
- Reinforces worn out stored pollen for late winter brood rearing
- When fed in sugar water with HBH, stimulates rapid build-up of nucs, swarms, package bees and weak colonies
- Can be used to help produce high quality queens by providing protein for royal jelly
- Can be used as a "Protein drench" when bees take pollen substitutes very slowly; just spray or drizzle the HBH-Protein into the cluster area; bees will clean it up, store it and use it

DIRECTIONS: Use 1 tbsp. (15 ml) to 3 tbsp. (45 ml) in a quart or liter of sugar water along with 1 tsp. (5 ml) Honey-B-Healthy® Feeding Stimulant with essential oils as a preservative. Best fed in inverted jars on top of the colony.

M01914 16 oz. Amino-B Booster
 Actual wt. 1.45 lbs. . . . **\$33.95**

M01915 M01914

Fumidil-B

Fumidil-B —The only known registered treatment for nosema. Feed in sugar syrup during the spring and fall to keep your spore counts low. For dysentery.

- No residue in honey when used as directed.
- Cost effective. Reduces expensive colony replacement and results in more productive colonies.

Add 1 - 500 gram bottle to 1 gallon of water to dissolve. Makes 110 gallons of treatment when added to 110 gallons of syrup.

M0017025 Fumidil-B 25g, Actual wt. 0.15 lbs. **\$37.95**

BROOD BUILDER

AVAILABLE IN PATTY OR DRY FORMULA

DRY FORMULATED FOR OUTDOOR DRY FEEDING

25 lb. bag — Dry
M0014625

5 lb. bag — Dry
M001465

If you live in some parts of California, the southwest or southern tier of the U.S., Brood Builder may be your answer to late winter or early spring outdoor dry feeding stimulation. If your bees can fly early in the year and collect Brood Builder, you can increase colony production.

Brood Builder must be protected from direct moisture such as rain, dew, fog and other inclement weather. Can be fed on platforms or trays directly in the bee yard. Honey bees collect Brood Builder because it is so close to pollen in nutritional value. Honey bees collect Brood Builder naturally, just as they would “real pollen.”

Directions for Use: Feed as is from the package on platforms or trays directly in the bee yard. Must be protected from direct moisture, such as rain, dew, fog and other inclement weather. Fill feeders often.

WET MOIST PATTY FORMULA

Brood builder is a great feed to give your hive the boost it needs to increase the brood population. Mix with sugar syrup or fructose until you reach a cookie dough consistency then sandwich between two sheets of wax paper. Feed in-between brood boxes if running doubles and on top of top bars if running singles. Additional sugar can be added for faster consumption. If small hive beetles are a problem feed ¼ to ½ lb. patties and reapply as needed. Store extra patties in your deep freeze.

AP23[®]

PATTIES WITH
HONEY-B-HEALTHY

BEST BEE NUTRITION ON THE MARKET

At Dadant & Sons we strive to bring you the best pollen substitutes available. After 4 years of working with two of the best nutritionists in the world, we are excited to bring you AP23. AP23 stands for artificial pollen and is the 23rd formulation to be developed and tested to date. It is formulated to deliver all of the currently known nutritional needs of the honey bee, with optimal balance of nutrient levels, in a highly palatable blend of specifically selected ingredients. If you have tried the other pollen substitutes on the market you owe it to yourself to try the best. Available in both dry and patty form.

AP23 is a high protein feed developed for all levels of beekeepers. It helps maintain colony strength by boosting populations, which result in better crop pollination and honey crops.

Guaranteed Analysis	
Crude Protein, min.	47%
Crude Fat, min.	3.5%
Crude Fiber, max.	3%
Moisture, max.	12%
Guaranteed analysis is for dry AP23

AP23 VS Competition:

1. Consumption rates are 2-3 times greater than all other pollen subs in our trials.
2. Optimal particle size for better digestibility. Digestibility estimated at 98+%.
3. All ingredients are from single manufacturing sources with known production parameters for improved consumption and digestibility.
4. Specific proteins used are isolated for purity — this means reduced indigestible sugars and other naturally occurring compounds that the bees cannot utilize.
5. Developed using computerized formulation program and based on specific nutrient needs of honey bees.
6. Formulated with bees preferred nutritional ingredients — based on 4 years of research with a wide variety of test diets.
7. Feed is consumed and stored by the bees. No signs of wasted feed on bottom boards or being drug out of hives as seen in other commercially available pollen subs in our trials.
8. Increase in certain amino acids help increase consumption.
9. Natural antioxidants and natural flavors.
10. Certain ingredients are added that may help optimum gut/bee health.
11. Repeat purchases by commercial beekeepers who report improved brood production and health.

AP23 WITH COMPLETE IS A SPECIAL RUN ITEM. Minimum quantity of 3200# or 72 – 40 lb. cases must be purchased for us to run them. This item is not stocked at any Dadant Branch location and will be ran upon receipt of the order. We recommend placing orders in advance of the Spring and Winter rush when able. Available FOB Hamilton, IL. Ships by LTL. *See page 136

DISEASES, PARASITIC BEE MITES AND PREVENTIVE MANAGEMENT

The number of Parasitic Bee Mites and diseases affecting honey bees is not large. Of these, only a few are commonly serious enough to cause severe colony and financial losses to beekeepers.

However, in any consideration of bee disease, adopt a preventive attitude toward the treatment and management of bees. Accept the fact that disease can be costly in causing some degree in loss of honey crop, in diminished service as pollinating agents, in the cost of medications and labor expended for treatment and loss incurred in replacement of equipment and bees.

The Parasitic Bee Mites that have the most economic impact on beekeepers

are the Honey Bee Tracheal Mite (*Acarapis woodi*) which lives within the breathing tubes of the honey bee and the large Varroa (*Varroa destructor*) which is an external parasite which feeds on the hemolymph or blood of older larvae and pupae and adult honey bees.

Most diseases affect the honey bee in the larval stage of its development. American and European foulbrood are the two most common. AFB is the most virulent and destructive of the

two. Chalkbrood and sacbrood less frequently cause extensive losses.

Occurring nationwide, nosema is the major adult bee disease and is probably responsible for a greater loss of honey crops than any other disease. Its intensity fluctuates from place to place, year to year, and from season to season within a year. The peak level of infection shortens lives of the workers and reduces their ability to feed larvae during brood rearing.

Bee diseases have no physiological effect on people handling bees and equipment; eating honey, pollen, or comb from an infected colony; or using beeswax or beeswax products.

SUGGESTIONS FOR PREVENTIVE MANAGEMENT

Apiary locations, large or small, should be carefully selected. If possible, avoid a low, damp spot where puddles of water will stand. Diseases can be spread by bees getting water from such pools, which may contain feces from infected bees or pieces of dead larvae and bits of comb from sick colonies. A source of running water nearby is preferred. Low spots may also be comparatively stagnant as far as air movement is concerned. The humidity of the area builds up during the cool periods of spring and fall. Too much humidity also contributes to poor wintering.

Light shade (or no shade) is generally preferable to a heavy dense shaded location which remains damp long after a sunny spot has dried out. The bees will not fly as early in the morning, as late in the evening, nor as well on cool days if they are setting in a dense shade.

Hives should be arranged within the apiary to keep drifting of bees from one colony to another at a minimum. Keep hives as far apart as practical. Placing them in a random manner is preferable, even though they may not look as neat as when in a straight line, where each one is exactly so far from the next.

Placing hives beside small bushes or such will help bees mark the location

of their hive. Natural markers will also make it easier for any supersedure virgins to locate their respective hives when returning from mating flights, lessening the number of queenless colonies.

A hive stand raises the hive off the ground and serves two main purposes. First, the bottom of the hive is less likely to rot or be eaten by termites. Even painted bottoms will need replacing more frequently when allowed to rest directly on the ground. Secondly, from the disease viewpoint, a wet bottom board is likely to be an "incubator" for the development of causative organisms. Keeping the bottom clear of wax scales and other debris, also helps reduce the buildup of disease.

A $\frac{3}{4}$ " or 1" auger hole bored near the hand hold on the front of the hive will make a top entrance for the bees which will facilitate air circulation within the hive, reducing the buildup of humidity throughout the brood area.

Since honey is a bee disease-carrying medium for spores, etc., it should not be fed to any colonies unless you are absolutely certain the hive from which it came was free of disease. Honey purchased on the open market should never be fed to bees. There is no way of knowing what diseases you are buying in it.

Prolific queens, with a high percentage of egg hatchability so that every comb is filled solid with brood, are essential to maintaining strong colonies. Such colonies are less likely to become weak, rundown, and in turn, susceptible to diseases.

Transferring combs between colonies should be kept to a minimum. The same is true of shaking bees from one colony for boosting the weak or starting new ones. Be careful not to let honey from broken burr-combs drip on the ground when moving supers, etc. Not only is it possible to spread disease in this way, but it is a good way to get robbing started at times.

When you know the colonies are free of disease, moving combs of bees and brood is a good method of reducing the population of a crowded hive and building up a weaker one. Doing this with combs from newly purchased colonies is risky.

Wintering only healthy, strong colonies increases the probability of survival in good shape. Should a disease-weakened colony die before spring, whatever honey is remaining often will be robbed by other colonies—usually the strongest ones. They, in turn, will probably become infected.

VARROA DESTRUCTOR

MEDICATION GENERAL USAGE

The following is offered as a guideline for medication usage. Be sure to follow label directions in your treatment program.

For the beginning beekeeper, choosing the right medications and knowing when to use them can be tricky. Following is a chart we have devised to simplify and explain these treatments. If you ever have any questions in regards to what type of

medication to use, call your nearest Dadant branch and they will point you in the right direction. We also suggest ordering your medications early so you will be prepared when it comes time to apply.

MEDICATIONS/USAGE	LENGTH OF TREATMENT	METHOD OF APPLICATION	TIME OF YEAR TO APPLY
Apivar <i>Varroa</i> see pg. 58	42 days	1 strip for every 4-5 frames. Works by contact only. Place in high bee activity areas.	Normally used as fall treatment. Cannot be used with honey supers on.
Apiguard <i>Varroa</i> (Also benefits in the control of Tracheal mites) see pg. 56	Two treatments: 1st: 12-14 days 2nd: 2-4 weeks	Place delivery tray on top of top bar frames. A ¼" space is needed. Close off screened bottoms and vent holes.	Should be applied during the fall, unless infestation is severe. Temperatures 60°F-105°F. Don't apply when honey supers are on.
Apistan <i>Varroa</i> see pg. 57	42-56 days	1 strip per 5 frames of bees.	When temperatures are above 50°F, generally Spring and Fall.
Formic Pro <i>Varroa</i> see pg. 57	14 days	Apply two strips near the edges of the brood box.	14 days. Daytime temperatures must be 50-85°F.
Mite Away Quick Strips <i>Varroa</i> see pg. 57	7 days	Apply two strips near the edges of the brood box.	7 days. Daytime temperatures must be 50-85°F.
Tetra-B Mix/ Oxytetracycline <i>Foulbrood</i> see pg. 52	Three treatments 4-5 day intervals	Sprinkle recommended dosage around edges of brood box on top bars of frames. Once a week for 3 weeks.	Treat Spring and Fall.
Oxalic Acid <i>Varroa</i> see pg. 55	1 Treatment - 1 minute per hive	Use drenching or vaporizer methods.	Most effective early Spring or late Fall when there is little to no brood in the hive
Paramoth <i>Wax Moth</i> see pg. 59	3-4 weeks	6 Tbsp. for 15 supers, duct tape all openings making as air tight as possible. Reapply crystals as needed. Air out supers prior to placing on hive 1-2 weeks.	Apply as needed, particularly in warm weather.
B402 Certan <i>Wax Moth</i> see pg. 59	Mix one part of B402 to 19 parts water (5% solution). Apply after frames have been extracted. Apply to both sides of frame (1 oz. fluid for deep frames) (2/3 oz. fluid for medium) (1/2 oz. fluid for shallow) Allow to dry before putting into storage.		Apply once after extraction. Needs to be used before any wax moth infestation and will give protection through and until the next season. It will kill young wax moth larvae.
Fumidil-B <i>Nosema</i> see pg. 59	25 gram Treatment	Dissolve 1) - 25 gram bottle into 1 gallon of warm water. Mix Treatment into 5 gallons of syrup. Feed 2-3 times per hive if necessary.	
	50 gram Treatment	Dissolve 1) - 500 gram bottle into 1 gallon of warm water. Mix Treatment into 110 gallons of syrup. Feed 2-3 times per hive if necessary.	

Hive Inspection Sheet Notepad

Hive Inspection Sheets help to record hive activity, requeening, treatments, feeding, honey storage, honey extraction, and the condition of the hive. The notepad is made up of 25 sheets with pre-drilled holes to fit into a 3-ring binder. Actual wt. 0.4 lbs. ea.

M01940 Hive Inspection Sheet Notepad **\$4.95**

VETERINARY FEED DIRECTIVE (VFD) LAWS

On Jan. 1st 2017 the Veterinary Feed Directive went into effect. All customers must have a VFD from their veterinarian to be able to purchase Tetra Bee Mix for the treatment or prevention of American and European Foulbrood. A copy of the VFD must be filled out and signed by your veterinarian for the number of colonies you are wishing to treat. You will then send a copy of the VFD to your local Dadant Branch. Once Dadant is in receipt of the VFD, they can send the antibiotic to you. The VFD form can be sent via fax, mail, or email to your local Dadant office.

To make things go as smoothly as possible we suggest building a relationship with your local veterinarian. If they themselves are not beekeepers, you should invite them to your apiary and show them the ins and outs of the beehive. You will want to teach them that beekeepers can use Oxytetracycline in two ways. One of them is being proactive. This beekeeper uses oxytetracycline before a sign of disease is present. It is also used reactively or by treating when disease is found within the hive. You will want to teach them about the times of the year that it is applied and how many applications it takes when treating. Most who treat proactively will treat in the spring and the fall. Others will treat only when the disease is present. Treatment time frames are 3 – 200MG doses at 4-5 day intervals. A VFD can be written for a period of up to 6 months by your local veterinarian.

If you have any questions regarding VFD laws that we didn't answer above, contact your local Dadant office and our sales staff will do the best they can to answer your questions or put you in contact with those who can. There is a chance that this will be appealed and done away with for small animals which would include honey bees. Should that happen, we will make an announcement via email and on our website at www.dadant.com.

Veterinary Feed Directive

All parties must retain a copy of this VFD for 2 years after the date of issuance.

FOULBROOD

DISEASE PREVENTION FOR HEALTHY BEES

Tetra-B Mix*

Tetra-B Mix is a ready-to-feed mixture containing the antibiotic oxytetracycline. Recommended as an aid in the control of American and European foulbrood. May be used for fall treatment of colonies prior to winter or for the spring treatment of overwintered colonies. Spread over the top bars of the frames in each section of the brood nest. All use should stop at least 6 weeks prior to a surplus honeyflow.

Bulk 10 lb. or 50 lb. bags.
Tetra-B does not expire.

- **READY TO USE**

Reusable Beetle Trap

This in-hive re-usable trap comes with 3 trays to hold your favorite beetle bait, vegetable oil, or diatomaceous earth. Has a hinged lid for easy access to clean for re-use.

M01543 Reusable Beetle Trap
Actual wt. 0.05 lbs. ea. **\$4.35**

Beetle Bee-Gone

Beetle Bee Gone sheets are an all-natural, chemical free way to trap small hive beetles. Place one to two sheets per brood chamber where beetles congregate. Re-apply sheets the next time working these infested colonies and watch them disappear naturally. 48 sheets.

Color may vary — yellow or blue.

M01545 Beetle Bee-Gone, Actual wt. 0.01 lbs. ea. **\$11.95**

West Small Hive Beetle Trap

The 1st Small Hive Beetle Trap That Works!

The West SHB Trap was designed to sit on the bottom board just where SHB naturally like to hide. The trap consists of a tray that you partially fill with a small amount of vegetable oil and a specially designed lid that is covered with almost 300 small slots. The SHB, in looking for a place to hide from the honey bees trying to catch them, head for the slots as an escape route, which is a dead end that leads directly to the tray filled with thick non-toxic vegetable oil. The SHB falls into the vegetable oil, are coated with it, suffocate, and die. It's just that simple!

VARROA MITE MEDICATION

ProVap 110 Vaporizer

*We're talking 20 seconds per hive! No wand to insert, just point and shoot!
No guessing on dosage! No compressor or battery!*

Just plug it in to an inexpensive inverter, generator or use house current. The vaporizer is a 110 volt electrical appliance, 330 watts, 3.3 amps. This is the one you've waited for and now it's here!

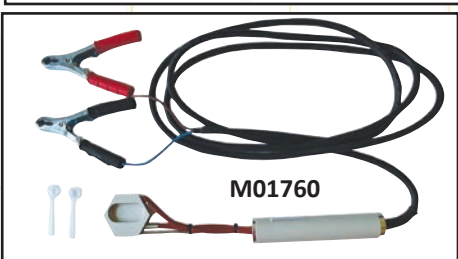

M01766 ProVap 110 Vaporizer, Actual wt. 3.5 lbs. **\$524.95**

Oxalika Vaporizer

From our friends in Italy come the The Oxalika Vaporizer. It runs on a 12 volt battery and comes complete with two dosing spoons. This sublimator is the only one of its kind with a device to control the temperature of the heating cup which will increase efficacy that is lost by many other vaporizers on the market that run at higher temperatures. Treatment time is 1 minute 30 seconds. No need for cooldown between treatments. Made in Italy.

M01760 Oxalika Vaporizer, Actual wt. 1.9 lbs. **\$172.95**

VarroVap Vaporizer

We are pleased to offer the VarroVap vaporizer. The VarroVap cannot be dunked in water. Wash with a wet rag or sponge in-between each application. Runs on a 12 volt battery.

M01780 VarroVap, Actual wt. 0.8 lbs. **\$149.95**

Oxalic Acid Safety Kit

Kit includes a pair plastic gloves, & plastic vent goggles for eye and hand safety. A syringe & metal scoop are also included to help in the application processes. It is also recommend to wear long clothing to avoid skin contact. Be sure to follow all safety guidelines and instructions on manufacturers label for oxalic acid.

Oxalic Acid sold separately.

M01774 Oxalic Acid Safety Kit, Actual wt. 0.31 lbs. **\$18.95**

Half Mask Respirator Kit

The 8000 Series Respirator conforms to the contours of your face. It seals comfortably and remains sealed, even while talking. Plus, the seal is extra-wide, so it fits more facial types. No inhalation valves to stock. No installation. Less maintenance, less parts. Cartridges snap-in, which eliminates mistreading. Plus, the weight is distributed evenly, without pressure points. The low profile provides a larger field of vision than any other respirator and makes it easier to wear safety eyewear. Be sure to review all fitting instructions and safety guidelines in the user manual prior to using this product. 2 cartridge filters included. Actual wt. 0.7 lbs.

VARROA: WAKE UP TO THE NATURAL EFFICACY OF APIGUARD®

A slow release thymol gel, a new and effective treatment

- A natural and non-toxic treatment
- Through thousands of treatments, efficacy rates ranged from 85% to 95%, with an overall average of 93%.
- It respects both the hive products and the consumer
- Encourages the hygienic behavior of the honey bee, preventing a number of related problems
- Resistance is controlled and unlikely to occur with Apiguard
- Ease of use: 2 x 50 gm treatment trays per hive, with an interval of 14 days, in summer just after the honey flow
- Best results occur when bees are active and maximum daily temperatures are between 60°F and 105°F.
- Though registered as a Varroa treatment, Apiguard has been proven to effectively treat Tracheal mites as well.

To Use Apiguard

Place the dosing tray or pad centrally on the top of the brood frames gel side up. Be sure to allow at least ¼" of spacing between the top of the tray and the cover using spacer boards or empty supers as needed. Apply the second dose 14 days after the first. Screened bottom boards should be closed while Apiguard is being applied.

Formic Pro*

Formic Pro is the next generation in formic acid treatments for mites. Made of all natural materials, this product can be used during the honey flow. Unlike Mite Away Quick Strips, Formic Pro has a longer shelf life and no temperature requirements for storage. Daytime temperatures still must be between 50°F - 84°F (10°C-29°C) when used.

Strips are to be placed across the top bars between brood boxes or on top of a single deep hive. Be sure to wear the recommended safety equipment for acid.

Treatment Options:

- 14 day Treatment: 2 strips for 14 days.
- 20 day Treatment: 1st strip for 10 days remove and replace with 2nd strip for an additional 10 days.

M01464	c/2 (4 strips total), Actual wt. 1.65 lbs.. . . .	\$20.95
M01465	c/10 (20 strips total), Actual wt. 7.2 lbs.. . . .	\$69.95
M01467	c/30 (60 strips total), Actual wt. 20.8 lbs.. . .	\$164.95

May not be available at all locations. Please call for pallet pricing. *cannot be shipped outside of the U.S.

Mite Away Quick Strips*

Mite Away Quick Strips are a Formic Acid polysaccharide gel strip which, when placed in the brood chamber of a honey bee hive, is an organic miticide that kills the Varroa mite where it reproduces under the brood cap. 2 strips per hive. Do not remove the white paper from the gel strips. Keep bottom entrances open the full width of the hive. Screened bottom boards can be left open if used along with top entrances. Treatment duration 7 days with daytime temperatures of 50-92°F.

May not be available at all locations.

Please call for pallet pricing.

VARROA MITE MEDICATION

AMITRAZ CONTROLLED-RELEASE TECHNOLOGY

1. Amitraz is a sub-lethal miticide that paralyzes Varroa mites. Varroa cannot keep holding on to the bees and fall to the bottom of the hive, leading to their starvation.
2. Plastic polymer strip: specially designed to ensure a regular release of amitraz on the surface of the strip after its placement in the hive. The polymer strip was chosen for its rigidity and its ability to continuously release the active ingredient over a minimum six-week period.

HOW IT WORKS IN THE COLONY

Apivar works by contact: the active ingredient is delivered continuously over time. As bees walk on the strip's surface they pick up molecules of the active ingredient and then distribute them throughout the colony.

B402 Certan

B402 Certan is the most advanced effective and economical product for the protection of your combs from damage by wax moths. It is a safe environmentally friendly product. It is a concentrated solution of Bacillus thuringiensis. It leaves no residues in wax or honey. Only one application needed for complete protection. Efficacy of up to 100% against wax moth larvae. It is used after the honey harvest, when the frames are stored. It must be used before a wax moth infestation. It will kill young wax moth larvae. A single application will provide protection against wax moth right up through to the following season. Applicators and mixers should wear long sleeve shirt, long pants, socks, shoe, protective eye wear and a NIOSH approved particle filtering respirator. Mix one part of B402 to 19 parts water (5% solution). Apply after frames have been extracted. Apply to both sides of frame, 1 ounce of fluid for deep frame, 2/3 ounce of fluid for medium frame and 1/2 ounce of fluid for shallow frame. Allow to dry before placing in storage. In warm conditions, once dry, supers should be protected from re-infestation by being wrapped or stored in an enclosed space.

- M02140** B402 Certan 5 oz., Actual wt. 0.5 lbs. \$38.95
- M02141** B402 Certan 1 quart, Actual wt. 3 lbs. \$199.95

M02141

SWARM PHEROMONES AND CATCH BOX

Swarm Commander Swarm Lure Crush Vials

M01998

A brand new product from Blythewood Bee Company. Swarm Commander Crush Vials are a new and easy way to bait your swarm traps. Simply remove the vial from the package. Crush the vial in the center until the internal glass vial breaks and the swarm commander fluid is released. Allow the fluid to absorb into the cotton plug. Swab the landing board of your hive as desired. After that, throw the lure into your box. Your hive will be baited for a minimum of 2 weeks (Tests show 20 days). Actual wt. 0.05 lbs.

M01998 Swarm Commander Lure Crush Vials. . . . \$18.50

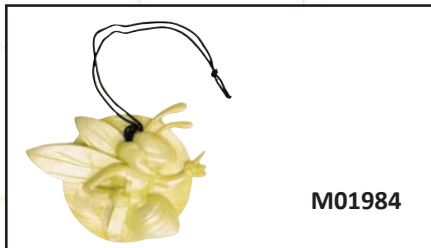

Swarm Commander — Spray

M01982

Swarm commander spray is the perfect attractant to use when trying to catch swarms of bees. Spray the inside of your bait box with swarm commander and watch the bees come in. 100 applications per bottle. Actual wt. 0.15 lbs.

M01982 Swarm Commander Spray \$39.95

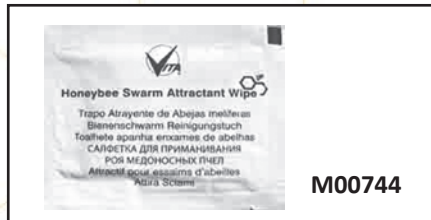

M01984

Swarm Commander Super Lure

This Swarm Commander Super Lure is huge. Creator Scott Derrick did it again with this awesome 90 day swarm attractant. Just hang it in your bait box and wait for the swarms to come. Actual wt. 0.1 lbs.

M01984 Swarm Commander Super Lure \$20.95

M00744

Swarm Lure

Vita Europe has come out with another great product. These swarm lures can be hung on the inside of your swarm box. Once opened, it is effective for 2 weeks then needs to be replaced. Hang at 6-8' off the ground. 10/box. Actual wt. 0.12 lbs.

M00744 Swarm Lure c/10. . . . \$25.50

M00741

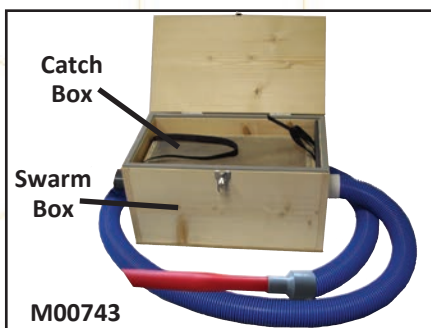

Swarm Catch

Swarm Catch contains Nasonov: the orientation pheromone, sometimes called the "come hither" pheromone. On average, swarms will occupy 50-80% of catch boxes with Swarm Catch (provided there is a reasonable amount of swarming in the area). *Place Swarm Catch lure into an empty super with comb (comb should not contain honey). Store lures in the freezer until use.*

- Capture swarms from your own hives thus reducing loss of honey bees.
- Add to your hive count and honey yield by capturing stray swarms from other hives in the area.

M00741 2 Vial Pack, Actual wt. 0.1 lbs. ea. \$13.65

M00742 5 Vial Pack, Actual wt. 0.5 lbs. ea. \$24.95

M00743

Swarm Box

Texas beekeeper Dwain Cleveland brought his swarm box to our attention. After seeing it in action, we thought we'd bring it to yours. Outer box connects to most shop vacs. Additional adapters may be needed as hoses will vary. Inner capture box holds approx. 3 lbs. of bees. More catch boxes may be needed, depending upon the size of the swarm you're trying to catch.

DVD included. Actual wt. 24 lbs.

M00743 Swarm Box. . . . \$226.55

M00743CB

Frames not included

Catch Box

For the larger swarm, more catch boxes may be needed. These are made to fit our swarm box only.

M00743CB Catch Box Actual wt. 4.25 lbs. . . . \$75.85

M60065

Entrance Excluder

The entrance excluder will keep your queen and drone bees inside the hive. Useful tool when seeing hives preparing to swarm in the spring. Place entrance excluder on front of hive with nails to pin it in place. Use while installing new packages and during the winter as your mouse guard.

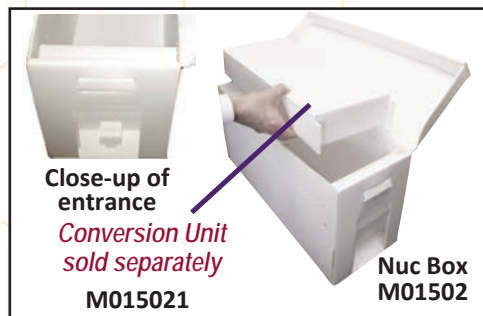

M60065 Actual wt. 0.4 lbs. . . . \$10.95

NUC BOXES AND COMPONENT PARTS

Pro Nuc Box

The Pro Nuc design is superior to any others we have seen. With locking lid, 2 feed ports, great ventilation and closable entrance this nuc box is needed in your bee mobile. Currently available in 9 5/8" depth size. Actual wt. 3.2 lbs. ea.

QUEEN REARING, SUPPORT HIVES AND QUEEN INTRODUCTION

QUEEN REARING

Assembled

Support Hive

Support hives are needed in every out yard you have. Two 4-frame hives make up the support colonies. Great for boosting a weak hive or for holding queens in case a replacement is needed. Entrances are on opposite ends to keep each colony from encroaching on the others territory. Comes with a special divided bottom board, single divided deep brood box, two 4-frame nucs and two inner covers with feed hole. Fully assembled and ready for a coat of paint. **Top covers and frames sold separately.**

B55101

Assembled

Queen Rearing Hotel

Our queen hotel is exactly what you need to continuously raise your own queens. Split into four 2-frame nucs or two 5-frame nucs. When you find a frame with a queen cell, put it and another frame into our queen rearing hotel and come back in a few weeks to find your mated queen or queens ready for placement into a split or queenless colony. You must use a standard 10-frame telescoping lid with this unit which is sold separately.

- B55101** Queen Rearing Hotel, Actual wt. 18.9 lbs. ea. \$64.95

Cloake Board

The Cloake board is a device invented by New Zealand beekeeper Harry Cloake to raise queens with a minimum amount of equipment. Consists of a wooden frame with queen excluder and metal tray and involves a series of stages which divide a colony into a queen right lower colony and queenless upper colony which improves acceptance of grafted larvae. Requires knowledge in grafting larvae. Full set of instructions provided.

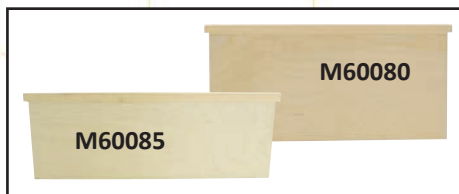

Assembled

B41301

- B41301** 10-Frame Cloak Board, Actual wt. 5.6 lbs. ea. \$42.95

6 5/8" and 9 5/8" Follower Boards

Our 9 5/8" and 6 5/8" follower boards are just the ticket to help your small hive grow into its larger box. Use the follower board in place of a frame to condense a hive down and expand it as it grows. Great for small swarms and splits. Use your standard 10-frame hive and make it into two separate nuc boxes. Great for helping your apiary grow.

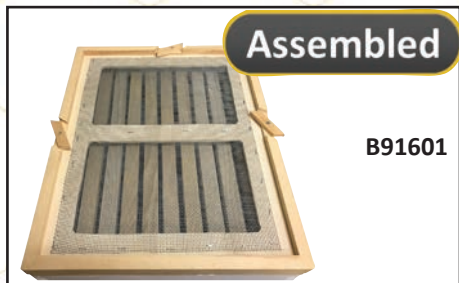

M60080

M60085

- M60080** 9 5/8" Follower Board, Actual wt. 2 lbs. \$8.25
- M60085** 6 5/8" Follower Board, Actual wt. 1.5 lbs. \$8.25

Double Screen Board

The double screened board makes requeening easy and efficient. When dividing a colony, remove your top chamber and place your double screen board on top of the bottom chamber and place your split on top of the double screen board. The older foraging bees will return to the bottom chamber leaving the younger bees, which will accept the new queen with much less stress. You can also replace the d/s with a queen excluder and run a double queen colony.

Assembled

B91601

- B91601** 10-Frame Double Screen Board, Actual wt. 2.1 lbs. ea. \$34.95
- 5+ \$32.95

- 5+ \$32.95

Requeening Frame

Our re-queening frame will work with most wooden queen cages. This allows the queen to be readily accepted prior to being released. Be sure to remove the cork from the candy end and secure queen cage to frame.

M01592

Assembled

- M01592** Requeening Frame, Actual wt. 0.45 lbs. ea. \$17.95

Nuc Introduction Board

The nuc introduction board will help you unite your 5-frame nucs into a standard 8- or 10-frame colony. Place on top of your colony and cover with a sheet of newspaper. Spray the paper with sugar water and the bees will eat through the paper uniting the two colonies together. After a few days move the frames from the nuc into your standard box.

B41401

Assembled

- B41401** 10-Frame Nuc Introduction Board, Actual wt. 1.4 lbs. ea. \$13.95
- B414018** 8-Frame Nuc Introduction Board, Actual wt. 1.4 lbs. ea. \$13.95

RAISE YOUR OWN QUEENS WITH THE EZI QUEEN SYSTEM

EZI-QUEEN SYSTEMS

Queen rearing

The system assumes basic queen rearing knowledge, see below for book *Contemporary Queen Rearing* (M00065).

Shown on hive
(hive not included)

M01320

BENEFITS OF OUR QUEEN REARING SYSTEM

- 5 MINUTES to transfer eggs or larvae into 420 queen cells
- WITHOUT TOUCH! Our transfer of eggs or larvae makes this system unique to the industry
- No need for individual grafting
- Advanced technology utilizing easy-step lay cage design for high yield production of queen bees
- The EZI-Queen System comes ready to assemble for the hive

WITH OUR EZI-QUEEN REARING SYSTEM

- ✓ eggs are layed out within 4 hours
- ✓ eggs hatch to larvae within 72 hours and in 12 days your queens are ready to emerge

EZI Queen Manual

Instructional manual on how to use the EZI Queen Systems.

BEEKEEPING SUITS

Dadant Zipper Veil Suit

Zipper Veil-Suit Combination was designed by *Dadant & Sons*. We added all the features our beekeepers wanted for total protection and comfort for a full day's work in the bee yard. This Zipper Veil-Suit Combination offers the fine features of the Dadant Folding Veil and the Dadant Coveralls to provide total protection for the beekeeper. Zippered side openings allow full protection and easy access to trouser pockets. Easily slip on over boots or shoes with generous zippered bottom pant legs. The location of the veil zipper holds the veil in place assuring perfect vision while allowing total freedom of movement. Easy on and off. We recommend using with the Dadant Plastic Sun Helmet. *When ordering, state catalog number and size. Because of numerous sizes, branch locations may be temporarily out-of-stock on some sizes.*

Helmet not included,
(sold separately on page 73)

Snow-White Coveralls

Dadant coveralls are a snow-white, polyester-cotton blend. Snow-white because white is less annoying to bees than darker colors and they are less apt to sting. Full front zipper for easy on and off. Sturdy construction — all points of stress are bartacked for extra reinforcement. Six roomy pockets hold the tools you need. Side openings allow easy access to trouser pockets.

Dadant Cricket Style Hat and Veil Suit and Jacket

We are pleased to offer both cricket style suits and jackets with poly-screen crush resistant veil. Both suits and jackets are made of a blend of polyester/cotton material. These are the ultimate in protection with added material in the knees and elbows. Suit offers a rear zippered pocket and two large front pockets which give plenty of room to carry what is needed in the beeyard. Ankles are zippered for easy on and off.

Dadant Alexander Veil *Best Value*

The Alexander Veil has a durable white cloth top that forms the hat. Full-vision, round one-piece screen-wire veil — no helmet needed. Inner elastic headband holds veil in position so top does not touch the head. Cloth top extends down back of veil to form sunshade for the neck. Long tie-down drawstring.

V01090 Alexander Veil, Actual wt. 0.35 lbs. ea. **\$24.95**

Dadant Excelsior Veil

A wire veil of one-piece round construction allows clear view in all directions. Double-seamed, open mesh netting, top and bottom. Elastic top. Bottom drawstring. Cool. Fits our helmet's and most hats. **Helmet not included.**

V01094 Excelsior Veil, Actual wt. 0.25 lbs. **\$21.95**

Dadant Tulle Veil

Tulle Veil uses clear-vision fabric that is really cool. Elastic cord at bottom and top so veil will fit any hat. This veil is the lightest weight and easiest to carry of all. Fold and put it in your pocket. Great for any outdoor activity! Keeps away mosquitos, black flies and gnats. Fits our helmet and most hats. **Helmet not included. Works best with ventilated or plastic sun helmets.**

V01092 Tulle Veil, Actual wt. 0.2 lbs. **\$17.50**

Pullover Veil

This pullover veil is perfect for quick inspections when donning full protective gear isn't warranted. Great for times you are just wanting to peek in the hive or as a spare veil for interested visitors.

REMOVING BEES FROM SUPERS FILLED WITH HONEY

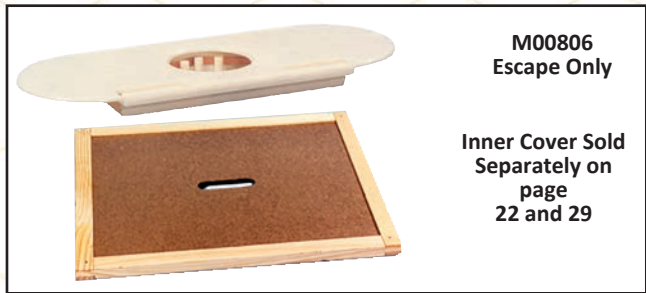

Using Bee Escapes

Bee Escapes are one-way doors which let the bees leave the supers but not return. The escape is placed beneath the supers of honey to be removed. (When removing more than one super of honey from an individual hive, we recommend placing an empty shallow super under the escape board to allow more space.) Supers are usually free of bees within 2 - 24 hours and no chemicals are used.

M00940

Assembled

M00806
Escape Only

Inner Cover Sold Separately on page 22 and 29

Bee Escape Board

The Triangle escape board works like a bee escape except the bees are able to leave the super much quicker. Face the triangle covered with hardware cloth towards the bottom of the hive. Bees will exit through escapes on the side of the triangle and can't figure out how to get back in.

- M00940 Bee Escape Board, Actual wt. 2.6 lbs.
10-frame. \$20.95
- M009408 Bee Escape Board, Actual wt. 2.14 lbs.
8-frame. \$20.95

Standard Bee Escape And Inner Cover

This bee escape is placed in the center opening of an inner cover (B15201) described on page 22 and 29. Actual wt. 0.02 lbs.

New and Improved!

Turbo Fume Board — 10-Frame

Dadant, along with hobby beekeeper/attorney Reeves Jones from Mississippi, have designed one of the first battery-powered Fume Boards. Insert batteries, spray your bee repellent on the pad & place on the hive. Turn on the motor & you'll be surprised how fast the bees leave the super. Save yourself time with this new unit. Not to be used with Butyric Acid. Board & blower can be purchased separately from complete unit.

Blower Requires 4 AA batteries, not included.

- M01993 Turbo Fume Board Complete, Actual wt. 2.4 lbs. \$29.95
- M01994 Battery Blower only for Fume Board, Actual wt. 0.5 lbs. \$11.95
- M01996 Fume Board only with cap, Actual wt. 1.9 lbs. \$19.95

UNCAPPING PRODUCTS

Electric Uncapping Knife with Control Unit

Blade temperature is controlled by using the knob on the control box. Set to temperature of your liking and uncap. High quality blades that are 10" long and 2" wide. Actual wt. 2.1 lbs.

M00343 Electric Uncapping Knife \$208.95

Speed King Electric Knife

Blade temperature is controlled by built-in thermostat. 120 volt operation. Wood handles are cool on your hands. High quality blades are 10" long and 2" wide. Guaranteed by manufacturer for 1 year with all warranties handled by manufacturer.

Actual wt. 1.4 lbs.

M00339 Speed King Electric Knife \$145.95

Combcapper

The combcapper fits standard 5 gallon pails and will hold all size frames, shallow and deep. Uncap directly into your 5 gallon pail. Easy clean up. Dishwasher safe. **Made in the USA.** Actual wt. 1.1 lbs.

M01366 Combcapper \$38.95

Comb Honey Cutter

This is a perfect tool for professional and backyard beekeepers who produce cut combs. With this tool, you no longer have to struggle to cut through cut combs using old-style cold cutters and sticky surfaces. The heated cutting blade makes cutting cut combs a breeze. It cuts precisely the exact size of the cut comb every time. It has a separate temperature controller that allows users to increase or decrease the temperature based on their experience in cutting combs. 4 X 4-inch cutting blade. Cut pieces fit perfectly in standard-cut comb plastic containers.

M00344 Comb Honey Cutter \$215.00

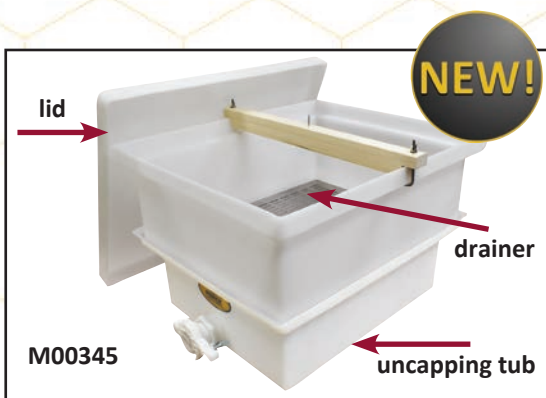

Pierce Deluxe Uncapping Tub

The bottom tank is equipped with a heavy-duty injection-molded 1.5" honey gate, featuring a scissor action for clean cut-off against an O-ring. This multipurpose tub kit includes a wooden crossbar with a stainless Steel frame-holder spike and J-bolts as well as a bottom tank that can be used either as a honey storage tank or as a bottling tank. It can hold 5 gallons of honey, and its lid can be used as a hive tray during honey harvesting time as well as during hive transportation. This tub has been specially designed and produced as an uncapping tub — it is not just another modified, off-the-shelf, non-food-grade plastic bin.

This tub's large capacity holds hours' worth of wax capping. Its grid prevents the capping from falling into the bottom tank, which collects honey drained from the wax capping. When in use, the two stacked tanks have a combined height of 18". When stacked for storage, the height reduces to 9".

M00345 Pierce Deluxe Uncapping tub
Actual wt. 22 lbs. ea.* \$215.95

*See page 136

Tub Filter

Fits with Pierce Deluxe Uncapping Tub This item is made of food-grade material, meaning you don't have to worry about any toxins altering quality of your honey. 600 micron food-grade uncapping tub filter.

WAX MELTERS

LET THE SUN DO THE MELTING!

M00501

Not Assembled

Solar Wax Melter

Solar Wax Melter — The perfect answer for melting up those burr combs and small amounts of wax. Melter is 19" x 24". Works best when painted black. Comes unassembled. Inexpensive polyethylene film for top to be purchased locally.

M00501 Solar Wax Melter, Actual wt. 20.53 lbs. ea **\$174.95**

Deluxe Solar Powered Wax Melter

The **ALL NEW Deluxe Solar Powered Wax Melter** is an affordable, high performance melter that uses the power of the sun to melt valuable wax with no cost to operate. It is capable of reaching and maintaining temperatures as much as 50°F above melting temperature without harmful UV ray exposure. Warm-up takes about 30 minutes and in most locations, melting can be achieved in 6-7 hours on a sunny day. Even on partly cloudy days, extended periods of melting are possible.

The Deluxe Solar Powered Wax Melter is constructed of 7-11 layer hardwood plywood which is painted black in the melting areas and polycrylic finish sealed on the exterior. It is assembled with waterproof, high strength urethane adhesive and power driven nails. Solar transfer is accomplished via multi-wall structured polycarbonate, 10mm thick sheet surrounded by a sealed wooden frame. A sliding, captive front door allows for exchanging of catch pans during the melting cycle without having to raise the main cover.

The melting and collecting areas will accommodate your pans, screen and filter cloths up to 18" x 12" x 5½" for the melting pan and up to 11" x 5" x 3" for the collecting pan. Use of aluminum pans typically sold in grocery stores and hardware outlets is recommended. Loading is easy since the cover can be completely removed providing total access to the melting area. The Deluxe Solar Powered Wax Melter can be shipped anywhere in the U.S. or Canada.

Dadant's FINE FAMILY OF MELTERS

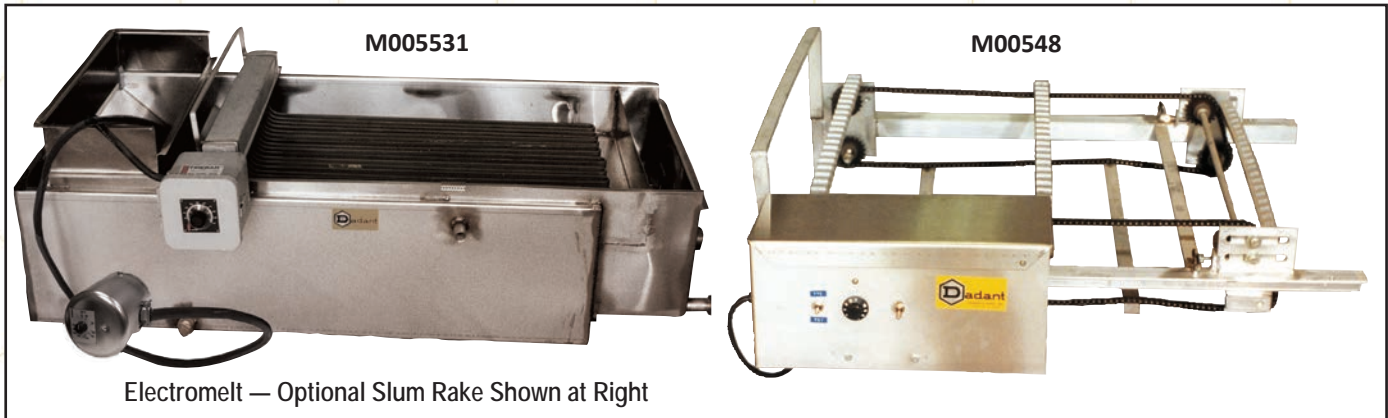

Dadant's Water Jacketed Mini Melter
Uncap directly into the unit
Draw beautiful wax from one outlet
Excellent quality honey from another outlet

Wax Melting Grid 1800 watt — 120 volt
1700 watt — 120 volt Immersion Heater for Water
Both Heaters Are Thermostatically Controlled

The water jacket speeds the wax/honey separation process and allows precise control of honey temperature. Cappings from 300 lbs. of honey per hour have been processed with the Dadant Mini Melter. Operating conditions vary, therefore, production rates will vary. Will handle most hand uncapping operations and some smaller volume power uncappers. Comes complete as shown. Please call or write for complete information sheets. Patented.

Electromelt — Optional Slum Rake Shown at Right

HONEY HARVESTING

Dadant's Water Jacketed Electromelt

A Proven Process

Separate Wax and Honey in 1 Step While You Uncap

Eliminates Spinners

Saves Time and Money

Optional Slum Rake System

Speeds Processing—Saves Time

Features and Benefits of the Electromelt

- 6900 watt, 240 volt melting grid
- Stainless steel flat heating grid
- Stainless steel tank, 16 gauge
- Stainless steel water jacket
- Works with all uncappers
- Fast start up
- No steam required
- 3 year warranty on electric melting grid

The Electromelt has been proven by commercial beekeepers using all types of uncappers. The unit was designed for and works most efficiently with cappings from uncappers other than the chain flail type. Producers report processing cappings from over two drums of honey per hour when using the rake system with the Electromelt. At the day's end, all honey and wax are processed — no extra hours, no additional jobs to do. Quality wax is in pans, and premium honey is in storage, operating costs are low, as energy losses are minimal. When paying 8 cents per kilowatt hour, operating costs are less than 75 cents per hour. Both the melting grid and water jacket heater are thermostatically controlled for precise control. Call or write for more information. **Ships Freight Only**

Dadant MANUFACTURED HONEY EXTRACTORS

6-12 Frame Radial Extractor with Motor

6-12 Frame Radial Extractor — No more hand reversing of frames — uncap, load, extract, and unload. Reel capacity 6 - 9 $\frac{1}{8}$ " deep frames; 12 - 6 $\frac{1}{4}$ " shallow frames. Frame guides provide positive frame placement. Ball bearings top and bottom. Powered by specifically designed direct drive motor with manually controlled electronic speed control. 120 volt operation. All welded 24" dia. 28" tall Type 304, 20-gauge stainless steel tank with inverted coned bottom and 1 $\frac{1}{2}$ " welded fitting. 1 $\frac{1}{2}$ " plastic honey gate with barbed adapter included. (See diagram below for construction details).

Ships Freight Only

ALL DADANT EXTRACTORS ARE MADE WITH GAUGES OF STEEL HEAVIER THAN OUR COMPETITORS!

M00412

CONSTRUCTION DETAILS

6-, 12-Frame and 20-Frame Extractors (20-Frame Extractor Shown)

- Rugged Direct Drive Motor with Manually Operated Speed Control
- Piano-style SS Hinge
- Stainless Steel Lids
- Ball Bearings Top and Bottom
- Individual Frame Guides
- All Welded Stainless Reel
- Cone Bottom
- Welded Stainless Steel Fitting

The concept of the Radial Extractor has saved more time and combs for beekeepers than any other invention. Radial extractors are the quickest, easiest, and most efficient way to extract honey from the comb. Frames are placed in the reel like spokes of a wheel. The reel spins, creating a centrifugal force and honey is thrown from both sides of the comb at once.

20-Frame Radial Extractor

- 4 Section Reel
- Type 304 Stainless Steel
- 20-Gauge Stainless Steel
- Holds Any Size Frame
- 20 Individual Frame Pockets
- 30" Diameter 28" High

The ideal choice for a growing extracting operation. From a few colonies to several hundred, the 20-frame radial is excellent. Comes complete with welded drain (2" Female Pipe Thread) with 2" to 1 $\frac{1}{2}$ " reducer bushing. A powerful variable speed direct drive motor powers the unit. It has a cone bottom and is 120 volt operation.

✘ **M00446** 20-Frame Radial,

COMMERCIAL FILTERS AND PUMPS

Commercial Honey Filter

Dadant's Commercial Honey Filter is a stainless steel inline honey filter which can completely filter your honey, making it ready for sale at a premium price. The closure mechanism is safer and much easier to use than band clamps. The housings are manufactured with investment cast covers and collars. Strong 3-piece design offers easy access to perforated stainless steel basket and micron – rated filter bag. Filter is 6" in diameter and 15.5" long with 1½" inlet and outlet. Engineered for honey pump flow rates of up to 5 GPM. Honey temperature must be 100°F or higher for longer filter bag use. Change filter bags before pressure reaches 40 psi. Filter bags sold separately below.

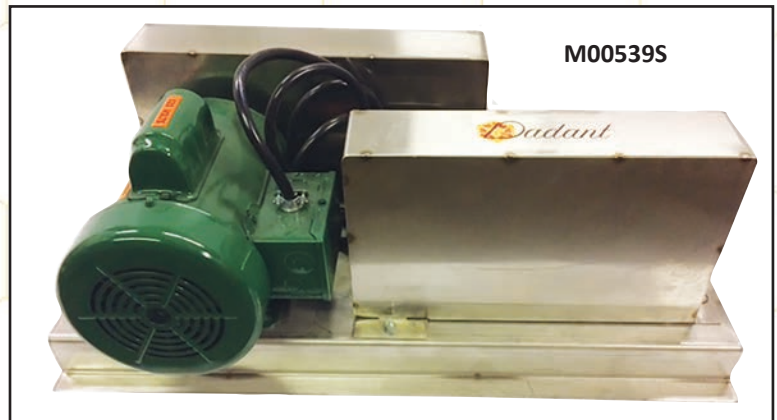

✘ **M00570** Commercial Honey Filter
Actual wt. 34.5 lbs. \$929.95

It is recommended that an air vent valve (not included) be installed when plumbing the filter.

Filter Bag

Dispensing Valve

M00457 3/4" Dispensing Valve for "thin" liquids, will fit 7 1/2 gallon and 10 1/2 gallon Pantry Tanks. Actual wt. 1 lb. ea.

M00457 Dispensing Valve \$29.95

M00581

M00582

M00583

Perfection Gates

Perfection Gates are cast iron construction with brass inserted seats, male pipe threads. Used on steel drums but not recommended for use on regular stainless steel honey storage or extractor tanks. Perfection gates will fit steel drums, 16-gauge or heavier metal storage tanks.

M00581 1 1/2" Perfection Gate,
Actual wt. 4 lbs. ea. . . . \$109.85

M00582 2" Perfection Gate,
Actual wt. 5,1 lbs. ea. . . \$114.95

M00583 3" Perfection Gate,
Actual wt. 7.3 lbs. ea. . . \$173.95

1" Brass Bottle Filler

Brass Bottle Fillers are ball valves that have been machined on one end to obtain good cutoff. Both on and off lever action. Comes complete with 90° bend. 1" has female pipe threads. Stainless steel movable ball seals against nylon seats to insure very smooth action and long wear. Actual wt. 2.88 lbs.

M00585 1" Brass Bottle Filler . . . \$107.95

Offset Handle
for Easy Filling

M00585

Stainless Steel

M005855

Honey Bottling Valve — 1 Inch

A solid, stainless steel, self closing no-drip valve, 1" threads. Rising plunger valve. Spring close. Can use M005854 adapter kit for use with 7 1/2 and 10 1/2 gallon honey pantry tanks.

M005855 Honey Bottling Valve,
Actual wt. 2.52 lbs. ea. \$169.95

03-40221

Replacement Thumb Screw for 1 1/2" Plastic Gate

For the M00579 plastic gate. Ship wt. 1 oz. ea. **03-40221 Metal Replacement Thumb Screw \$1.25**

Can use with (7 1/2 gal. & 10 1/2 gal. Tank) for "thick" liquids or use the following:

M005855 SS Bottling Valve or M00585 1" Brass Filler

Adapter Kit M005854 is required to fit either valves.

M005854

Adapter Kit

M005854 Adapter Kit for Honey Bottling Valve-M005855. To fit M00455, 10 1/2 gallon Dispensing Tank, available on page 95. M005854 adapter kit will also work with M00456 7 1/2 gallon honey pantry tank. Actual wt. 1.02 lbs. ea.

M005854 Adapter Kit \$19.95

M00585, M005855 will fit tanks with 1" male thread outlet directly with no adapters. Valves can be used with other size outlets, but will require adapters.

HONEY HARVESTING

Pump Control-Strainer

15 Gallon — 12" x 12" x 32"

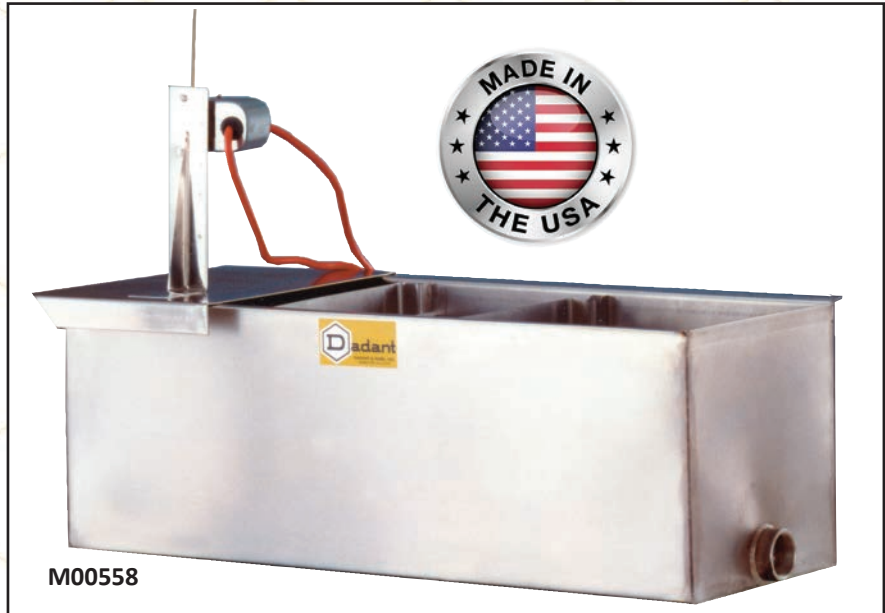

Collect honey directly from your extractor, strain out most foreign material, and control your honey pump in one operation. Single tank unit is all MIG welded stainless steel. Comes complete with wired float switch and strainer screens. Comes with Type 304, 16-gauge, stainless steel 1½" female pipe thread welded inlet and outlet fittings.

Actual wt. 24.35 lbs.*

Ships Freight Only.

M00569

HONEY HARVESTING

**Portable Table Top Unit — Self Priming —
All Electric (120 volt) Pack From Any Bulk Container —
Easy To Adjust Fill Quantity**

Fill Master

Power Bottle Filler Excellent — No Drip Accurate — Dadant Designed — Dadant Mfg.

The Fill Master was revised last year with a higher torque motor. This allows the unit to fill bottles with 75°F honey (may see fill volume variations and colder temperatures). But accuracy of filling volume is more accurate from 100-110°F. The gear pump also works very well for creamed honey making a very smooth texture. The Fillmaster has been used by our customers to fill containers with gear oil, dressings, maple syrup and beer/wine along with other viscous products.

The Fill Master is Dadant's answer to many requests for a simple, no drip, easily adjusting, inexpensive, accurate bottle filling machine. As with any bottle filler, the unit works best with warm (110°F) honey. No special bottling tank is required as it is self-priming. You may pack from 60# buckets, storage tanks or anything that holds honey. Adjust fill level from ounces to gallons in seconds. No fill limitations. No air supply needed. A great unit at a low price.

The Stainless Steel Fill Master is made out of Type 304, 20 gauge, stainless steel. Free video — just give us a call. Branch pickup is available.

Ships Freight Only.

Many products require indirect heating to prevent scorching, hot spots or overheating, and to assist bottling, processing or material handling. This tank works like a "double-boiler" and is basically a smaller tank inside a larger tank. The space between the tanks is filled with water and an immersion heater is immersed in the water. In turn, the heated water warms the product that has been placed in the inner tank. This indirect heating is a gentler method of warming and has been found necessary to ease product handling and prevent damage to products such as honey, waxes, soaps, syrups, etc.

DADANT PUBLICATIONS

The Hive and the Honey Bee 2015 Edition

The 2015 edition of *The Hive and the Honey Bee* continues a 162 year tradition started by the father of American beekeeping, the Rev. Lorenzo Lorraine Langstroth. Langstroth entrusted the continuation of this book to his trusted friends Charles Dadant and his son, C.P. Dadant. Over the years “The Bible of American Beekeeping” has been continually updated and enlarged to meet the needs of a growing and changing beekeeping industry.

This new edition is 27% larger than the 1992 edition and is composed of 29 chapters written by a staff of 44 beekeeping experts. In addition, it has 660 photos (most of them in 4-color) and 151 drawings, graphs and tables. The 2015 edition is truly a complete beekeeping library in one book. Professionally indexed for easy information searches. Hardcover, 1057 pages. Actual wt. 5.35 lbs.

M00010 . . . \$56.15

American Honey Plants

Authored by honey plants expert Frank Pellett, this classic book on American honey plants has been reprinted in its entirety. Recognized as the best and most comprehensive book ever written on American honey plants, this volume has been out of print and hard to find for many years. Order your copy now while supplies last! Beekeeping artist Roby Baer has provided a wonderful new color cover that makes this book a true collector’s volume. Softcover, 467 pages. Actual wt. 1.95 lbs.

M00125 . . . \$25.70

First Lessons In Beekeeping

The new *First Lessons in Beekeeping* introduces the prospective beekeeper to the basics of beekeeping through easy-to-understand text and 150 color photos on honey bee biology, beekeeping equipment, management, honey production and processing, as well as disease diagnosis and treatment. In the preface to this book, author Keith Delaplane says of his first book on beekeeping, “Its pages opened to me a golden world of honey bees and beekeeping and guided my stumbling steps that first spring season. My story is but one of thousands who have passed through the door opened by Dadant’s little book.” That “little book” was the 1968 edition of Charles P. Dadant’s 1917 classic *First Lessons in Beekeeping*. Dadant’s book and its succeeding editions have been America’s first stop for beginning beekeepers for over 90 years. For the latest edition, Delaplane honors the tradition of sticking to the basics, while fully engaging the new realities of beekeeping in the 21st century. Here in this book is everything you need to know to become a successful beginning beekeeper. Also available in Spanish. Softcover, 166 pages. Actual wt. 0.75 lbs.

Outapiaries and Their Management

This rare volume written by M.G. Dadant was first printed in 1919 and has been out of print for many years. Now Dadant & Sons has reprinted it in its entirety, along with all of its interesting and historical photographs. This is one of the few books in existence written exclusively on the subject of establishing and managing new beeyards. Its good advice is still relevant today and its historical significance makes it a real collector’s item. Softcover, 124 pages. Actual wt. 0.35 lbs.

M00030 . . . \$9.20

Dadant System of Beekeeping

C.P. Dadant’s excellent instructional book on his beekeeping methods was popular for many years after it was first published in 1920. Now Dadant & Sons has reprinted it, along with a new cover that features historical photos of C.P. Dadant working his hives, as well as photos of his home beeyard and a personal portrait. This book contains a wealth of practical beekeeping and historical information. Softcover, 115 pages. Actual wt. 0.35 lbs.

Raising Honeybee Queens

Raise your own superior queens and you'll never need to buy bees again! This fully illustrated guide makes self-sufficient beekeeping accessible to everyone. If you've ever raised queens, this book will give

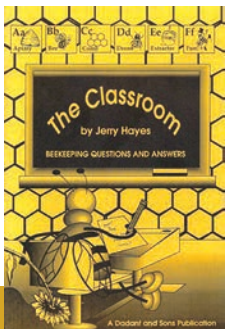

you confidence to start and succeed. If you are an experienced queen breeder, you will find a slew of tips to make each step of the process even better. Learn from a professional queen breeder with over 30 years' experience, and your beekeeping will never be the same after reading this book. Over 150 full-color photographs, drawings, and diagrams. Concise, well-organized guide. Actual wt. 0.98 lbs.

M02315 . . . \$29.85

The Classroom — Beekeeping Question & Answers

Jerry Hayes, our Classroom writer for the *American Bee Journal*, has put together a huge selection of the most asked beekeeping questions and answers that have been sent to *The Classroom* over the years. Great for the beginner or seasoned veteran. Book

chapters deal with management, bee biology, diseases, parasites and treatment, pesticides, swarming, moving bees, pollination, equipment, honey, propolis, stings, queens and much more! Honey gold softcover. 300 pages with photos. Learning really can be fun! Actual wt. 1.15 lbs.

M00069 . . . \$12.30

Contemporary Queen Rearing

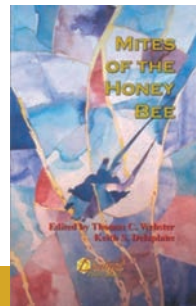

According to the late author, Dr. Laidlaw, "Contemporary Queen Rearing is still the best book I have written on practical queen rearing." Information on producing virgin queens, mating the queen, use of queens, package bee production, stock maintenance and much more useful information.

Softcover, 199 pages. Actual wt. 0.7 lbs.

M00065 . . . \$12.90

Mites of the Honey Bee

This is a must-have book for any beekeeper who wishes to understand the tracheal and varroa mite problems in the United States and the potential for control of these two serious honey bee pests. Twenty-seven

expert authors have come together to write 18 concise chapters on *Mites of the Honey Bee*. This 300-page hardcover book is amply illustrated with photos, drawings and graphs to augment the text. By Thomas C. Webster and Keith S. Delaplane. Actual wt. 1.4 lbs.

M00095 . . . \$10.25

Mating Biology of Honey Bees (*Apis mellifera*)

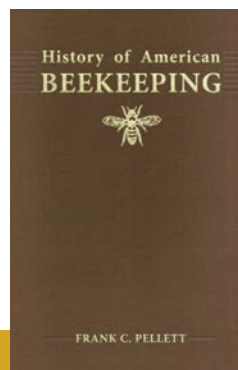

Authors Gudrun Koeniger, Nikolaus Koeniger, Jamie Ellis, and Lawrence Connor teamed up to write this unique book on the mating biology of honey bees. This hardcover book is amply illustrated with color photos. Bee expert Dr. Marla Spivak at the University of Minnesota says, "Here is

a book that allows you to brush up on all the mind-bending details about honey bee mating biology ... Bee sex is complex and beautiful and fortunately, there are still mysteries for future researchers to unravel." Hardcover, 155 pages. Actual wt. 0.95 lbs.

M02311 . . . \$32.95

History of American Beekeeping

This is one of the few comprehensive books ever written on the history of American beekeeping. Authored by the late *American Bee Journal* editor, Frank C. Pellett, in 1938 this once very rare book has been reprinted in its entirety, along with its original historical photos. This is a fascinating and valuable historical document that details the rise of American beekeeping and the beekeeping pioneers who made it happen. Hardcover, 213 pages. Actual wt. 1.05 lbs.

The Small Hive Beetle *Aethina tumida* Murray

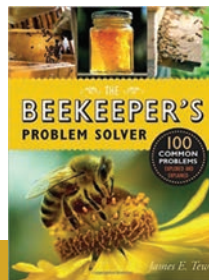

The importance of the role played by honey bee pests in the world is becoming more recognized each year, not only because of attention given to the pest species, such as the varroa mite and small hive beetle, but also because of the increasing realization that honey bees are extremely valuable to nature and humanity. The author, Wm. Michael Hood, is Professor Emeritus of Entomology, Emeritus College, Clemson University, South Carolina, USA Softcover, 142 pages. Actual wt. 0.59 lbs.

M02316 . . . \$23.70

The Beekeeper's Problem Solver

Author James Tew writes about 100 common problems that beekeepers might encounter while working their bees or extracting their honey. Dr. Tew answers these questions in clear and simple terms. From hive management to diseases and from equipment to honey production, each key area is tackled in depth, with photographs, practical tips, and useful insights. Softcover, 223 pages. Actual wt. 1.25 lbs.

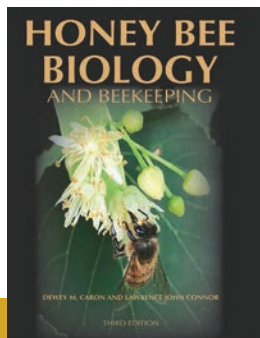

M02310 . . . \$20.60

Honey Bee Biology and Beekeeping 3rd Edition

First released in 1999, Honey Bee Biology and Beekeeping is widely accepted as a major textbook of Apiculture (beekeeping). **This is the third major revision of the text.** It explains bee and beekeeping basics in a manner meaningful to people who lack an extensive background in biology. Yet it is not over simplified, and provides a meaningful source of beekeeping information for the informed beekeeper. The Third Edition has been carefully edited, updated and expanded to 480 pages. New chapters have been added, as have colorful new graphics and photographs. The Glossary has also been expanded.

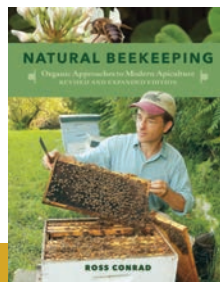

This comprehensive textbook easily replaces many beginner books while adding comprehensive details of bee biology essential to becoming a successful beekeeper and student of the honey bee. Features many new full-color photos by the authors, selected beekeeper-photographers, as well as new color drawings by Jon Zawislak.

M000733 . . . \$90.00

Natural Beekeeping by Ross Conrad

Author Ross Conrad has been hailed by many beekeepers for his "organic approaches to modern apiculture." Ross believes that many beekeeper disease and pest problems can be solved without using harmful chemicals. With news that some chemical honey bee disease and pest treatments are no longer working, Ross says, "It's time for a new approach. *Natural Beekeeping* offers a holistic, sensible alternative to conventional chemical practices by proposing a program of natural hive management." Softcover, 240 pages. Actual wt. 1.9 lbs.

CHILDREN'S BOOKS

Andy the Ant Learns the Buzz On Bees

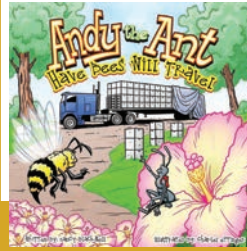

Learn the Buzz on Bees! This is a colorful children's book on bees written by Nancy Blackwell and illustrated by Charles Ettinger. Join Andy the Ant as he treks through an exciting adventure inside a beehive with his new friend, Beatrice the Bee. Activities in the back of the book include some tasty honey recipes for kids to try at home. Hardcover, 32 pages. Actual wt. 0.5 lbs.

M00104 . . . \$20.60

Andy the Ant Have Bees Will Travel

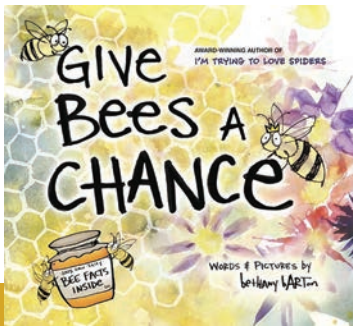

A must have academic resource for the budding young scientists in your life. This informative book takes readers on a journey of the migratory bees. Andy the Ant will help them discover the importance of these special bees that are transported great distances to farms and orchards for pollination. It also shows how commercial beekeepers care for them. Actual wt. 0.5 lbs.

M01732 . . . \$16.45

Give Bees A Chance

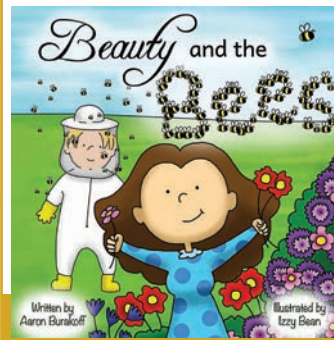

Not sure whether to high-five bees or run away from them? Well, maybe you shouldn't high-five them, but you definitely don't have to run away from them. Give Bees a Chance is for anyone who doesn't quite appreciate how extra special and important bees are to the world, and even to humankind! Besides making yummy honey, they help plants grow fruits and vegetables. And most bees wouldn't hurt a fly (unless it was in self-defense!). Hardcover, 40 pages. Actual wt. 0.91 lbs.

M00429 . . . \$17.50

Beauty and the Bees

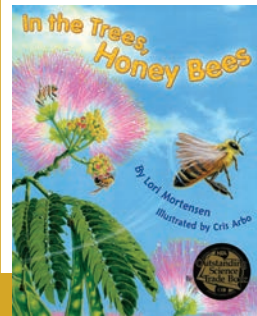

Join Beauty in this farm-friendly adaptation of a timeless fairy tale that reminds us of how sweetness can be found in unexpected places. Softcover, 25 pages. Actual wt. 0.4 lbs.

PUBLICATIONS

Essential Book of Homesteading

In barnyards and backyards, on rooftops and in alleyways, a movement is happening — the modern homesteading movement. Whether it's turning a lawn into a vegetable garden, getting a flock of chickens, or transforming cucumbers into pickles, people everywhere are taking charge of their own food supply. Ashley English, a major figure in the return to homesteading, gives newcomers her time-honored tips for successfully overseeing food production in their own homes. Totally updating material from her phenomenal homesteading books — Keeping Bees, Keeping Chickens, Canning & Preserving, and Home Dairy — this collection covers everything from preserving jams and jellies to whipping butter and keeping a hive of honeybees. Ashley provides entry points, troubleshooting tips, and inspiration for putting the food your family consumes back in your own hands. Hardcover, 168 pages. Actual wt. 2.42 lbs.

SOAP MAKING

Soap Cutters

These soap cutters make a simple task of cutting soap into bars.

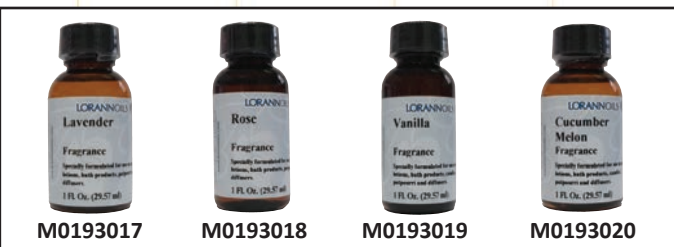

- M04050** Straight Cutter
Actual wt. 0.55 lbs. **\$13.50**
- M04051** Krinkle Cutter
Actual wt. 0.35 lbs. **\$13.50**

Wooden Soap Mold

One of the easiest ways to make soap is to use a loaf mold. This wooden mold will produce a loaf that is 3”H x 8”W x 12”L. Simply line the inside of the mold with wax paper or plastic wrap taking care to minimize creases and folds to avoid “blemishes” in the soap. Once the soap has set for 24 hours, unlatch the mold to remove the soap and then let the soap cure for another 24 hours before cutting.

- M04171** Wooden Soap Mold
Actual wt. 2.95 lbs. **\$31.95**

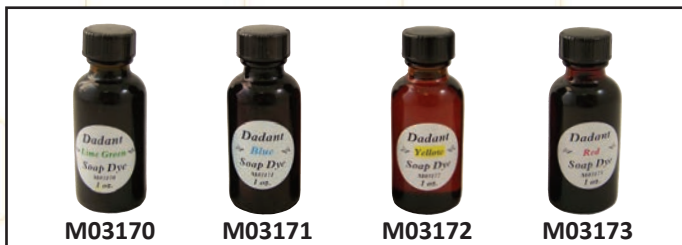

Liquid Fragrances for Soap

These highly concentrated liquid scents should be added to the soap base before pouring.

Precise instructions eliminate the guesswork that too often creeps into how-to books and help you avoid common mistakes. Softcover, 184 pages. Actual wt. 1.4 lbs.

M03003 Candle Making Basics \$19.95

-- NO SUBSTITUTIONS OR PARTIAL RETURNS ON KITS --

How to Make Spiral Candles

1. Cut sheet on the bias, making cut 2 inches from the corner of the sheet.
2. Lay 2/0 wick on straight edge of sheet and crimp edge of sheet over it.
3. With fingers spread over length of candle, start to roll wax making sure you roll tightly while keeping bottom end of candle even.

How to Make Pillar Candles

1. Use full sheet, place #2 wick across narrow end. Crimp edges to secure the wick.

2. Roll tightly, keeping the edges even

3. Finished candle

COMPANY POLICY

FREE SHIPPING

Free Shipping applies to most orders placed from this catalog and our online store for orders over \$150 prior to tax and other handling charges. Items will be sent regular ground by the carrier of our choice within the lower 48 states. Items marked with the symbol  are excluded from the free shipping offer. The items included/excluded from free shipping are subject to change without notice. Due to rising cost for shipping, backorders are shipped and billed separately from your original order. Customers will be responsible for the additional shipping charges on all back orders. If you wish to have your order held for the back ordered item please put that in the notes section online or advise the customer service rep when phoning in an order. AK and HI are excluded.

SHIPPING RATES

Customer pays all freight cost unless otherwise stated or agreed upon. Large orders over 200 lbs will be reviewed to determine if the order will go regular ground or by freight. If we determine the order is too large to go by ground, we will compare different freight lines to get the best possible rate for you. Next day, 2-day, & 3-day shipments will be available at expedited rates. Freight is F.O.B Shipping point meaning customer take full responsibility upon leaving Dadant & Sons shipping point. **NOT GUARANTEED, NO REFUND**

ADDITIONAL CHARGES

Rural Area: \$2.75	Delivery Acknowledgement: \$3.00
Extended Residential: \$3.50	Call Tag Required: \$9.00
Address Corrections: \$14.00	Handling Fee per shipment: \$2.00

Shipping rates may increase at any time due to rising shipping cost and surcharges

EXPORT ORDERS

Orders for export may include shipping, special packaging and documentation fees at the customer's expense. We accept Visa, MasterCard, Discover, American Express & checks drawn from a US Bank in US currency. For large container orders, we accept a bank wire transfer to our bank account or a letter of credit. All bank wire transfer cost and exchange rates are the responsibility of the customer.

PAYMENT METHODS

We accept Visa, MasterCard, Discover, American Express, check drawn on US bank account, wire transfer, money order & cash.

OVERPAYMENTS

May be refunded or credited to customers account.

RETURNED CHECK:

All returned checks will have a \$25.00 service fee

PICKUP ORDERS

All pickup orders can be picked up at the local branch where the order was placed at. Pickup times can vary by branch. In most cases, if you contact your local branch ahead of time, we will have your order ready for pickup when you arrive.

BACKORDERS

Backorders are shipped & billed separately from original order. Customers will be responsible for the additional charges on all back orders. Back orders can be dropped from original order at customer's request.

SPECIAL ORDERS

A 50% deposit must accompany all special orders. Some special orders may be subject to a cancellation charge. Remaining balance due prior to shipping.

WARRANTY

Dadant & Sons warrants its equipment to be free of defects in material and workmanship. If within 30 days of purchase you feel an item to be defective, please call for return authorization # and shipment instructions for the return. We will refund your purchase price along with all transportation charges. This warranty does not cover

any damage to equipment arising from alteration, abuse, or use of product for other than its intended purpose. We reject all implied and expressed warranties.

LIABILITY

Because conditions of use are beyond our control, we make no warranty or representation, express or implied, except that all products conform to the description provided by the manufacturer on sales literature or product labels. Our liability is limited to the purchase price paid. Glass containers ship at your own risk.

PRODUCT SUITABILITY

Many States & localities have codes and regulations governing sales, construction, installation, and or use of products for certain purposes. While we attempt to assure that our products comply with such codes, we cannot guarantee compliance in every situation. We cannot be responsible for how the product is installed or used. Before you purchase and use a product, please review both the product application and local codes and regulations. Be sure that the product, its installation, and its use will comply with them.

DAMAGED FREIGHT

All merchandise is shipped "F.O.B. Shipping Point". All products become your responsibility as soon as it leaves Dadant & Sons Inc. The freight carrier is responsible for complete and safe delivery or your merchandise. Inspect the packaging and merchandise upon arrival. If the freight carrier fails to deliver your merchandise in good condition, it is your responsibility to note this to the driver upon delivery. Also contact us immediately so we can make a claim with the carrier on your behalf.

ORDER DISCREPANCIES

Check all orders immediately upon receipt and contact us within 7 business days on any discrepancies/damage or we cannot be responsible for errors.

RETURNED MERCHANDISE

If you want to return an item, please call 1-888-922-1293 or contact the local branch where the item was purchased from. 1) Item must be in original carton and in good condition, 2) Returned within 30 days of receipt. 3) Must be returned to location of original purchase. 4) Original receipt required. 5) Charges will be applied to the unit reshipped to you with credit applied back to your method of payment upon receipt of original item.

LIMITATIONS

1) In most cases a 15% restocking fee will be charged. 2) To insure purity, we cannot exchange or offer refunds on beeswax or beeswax foundation. 3) We cannot accept returns on medications, containers, or bee feeds. 4) Restocking fee of 35% for all pre-approved book returns. Exception: If we made an error, we will give a full refund and pay the freight both ways.

STATE SALES TAX

We are required to collect sales tax where applicable by law.

HOLIDAY CLOSING

In addition to recognized national holidays, we will be closed the day after Thanksgiving.

CLOSING FOR INVENTORY

We will be closed on **August 29 & 30, 2024** for our annual inventory.

CATALOG ERRORS

We are not responsible for typographical or photographic errors that may appear in any Dadant material. We reserve the right to make adjustments or corrections due to changing market conditions, product discontinuations, or typographical or photographic errors in products.

Hours:

Contact your local Dadant Branch for hours of operation. Each branch may vary. (See page 137)

To Place Your Order

For maximum savings on freight, refer to the map on the back cover and select the Dadant branch closest to you.

PHONE

By Phone: Dial the Toll Free Order Number for the Dadant Branch nearest you for better customer service when placing your order. *(For faster service, please have your order written down and your credit card number ready. Also, please know your **Dadant Customer Number** (located above your address label on the back cover) to speed up the order process.*

FAX

By Fax: Make out your order with item numbers and quantity and fax the completed order to your nearest Dadant branch.

MAIL

By Mail: Make out your order with item numbers and quantity and mail the completed order to your nearest Dadant branch.

ONLINE

By Internet: Check out our website: www.dadant.com.
Online ordering available at www.dadant.com/catalog.

We Ship By:

National/regional carrier and Truck Freight. Special priority shipping options available at higher costs.

Please be sure to provide the correct shipping address with your order. Charges for incorrect addresses will be forwarded to your bill. Additional charges for rural delivery will be added to your invoice.

WE CANNOT SHIP TO **P.O. BOXES**. PLEASE PROVIDE A PHYSICAL ADDRESS TO SHIP TO.

Check website or call for truck freight quotes.

If you provide a valid email address, we will send tracking information for your order if the carrier provides this service. Depending on the carrier, shipments may not be able to be traced until 30 days after shipment has been made, which may be unfeasible due to the seasonal nature of our business. We will be happy to provide a quote with any alternate carriers available to us if you request it with your order.

We reserve the right to bill you for additional shipping charges. We reserve the right to ship it from a different branch to complete your order in a timely manner.

** Dimensional weight may be used rather than actual weight. Dimensional weight is a formula used by package delivery companies to determine a billing weight based on density. Some items may show the billing weight rather than the actual weight.*

Dimensional rates are calculated on **every shipment**.
